

Why Monitor Concrete Temperature? And How?

Peter Taylor

What Are We Talking About?

- Maturity
- Isothermal Conduction Calorimetry
- Field Semi-Adiabatic Calorimetry
- Heat of Hydration
- Setting Time

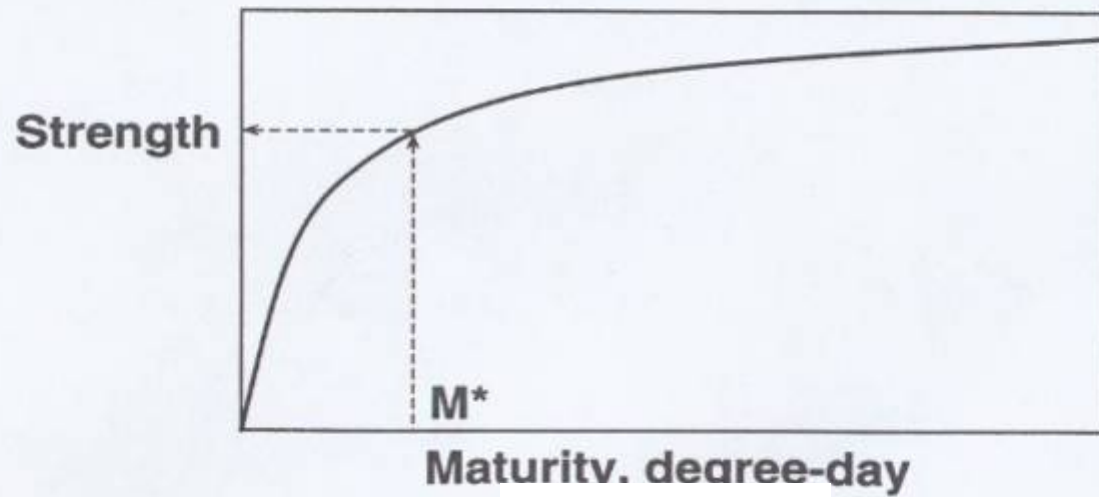

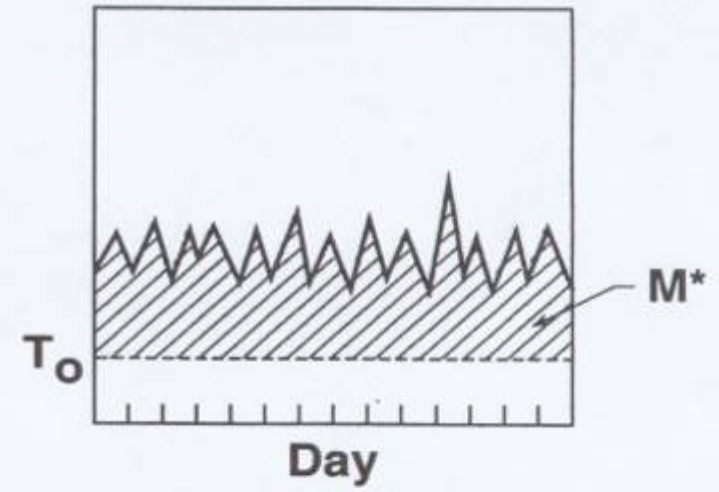

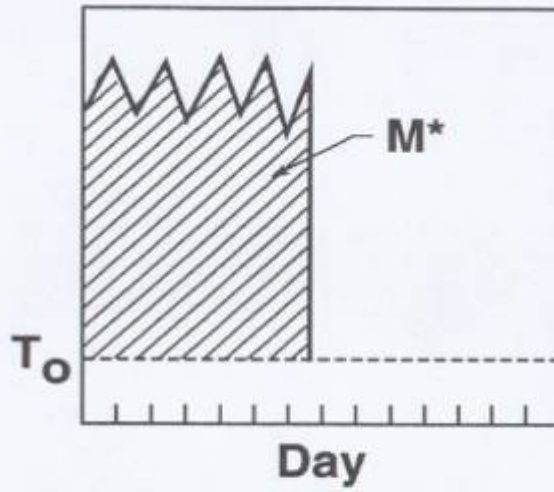

Definitions

- Isothermal (constant temperature)
- Adiabatic (no energy transfer)
- Semi-adiabatic (some, known, energy transfer)

Maturity

- Using a time/temperature function to estimate strength (or other property)
- No thermal control

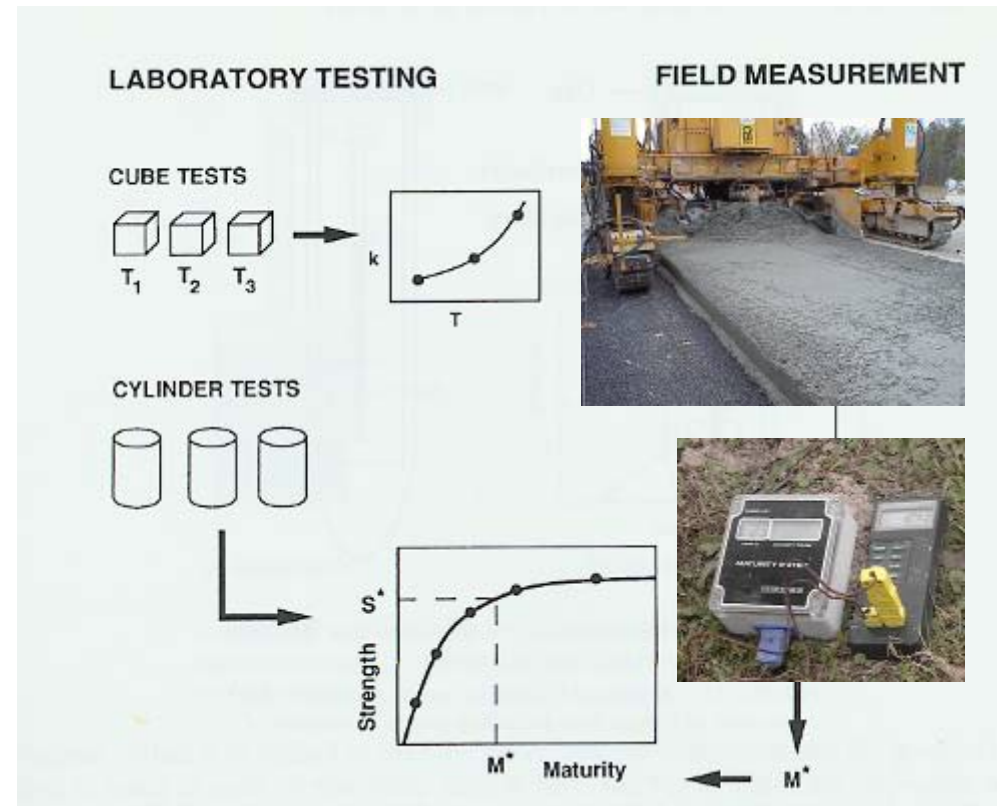

Why?

- Replaces Temperature-Matched Curing of Cylinders in Thermal Control Plans
- Can Reduce Construction Time

How?

- Use laboratory testing to develop a relationship
- Monitor concrete using temperature probes

Note: Maturity testing does not indicate quality of concrete

ASTM C1074 Maturity

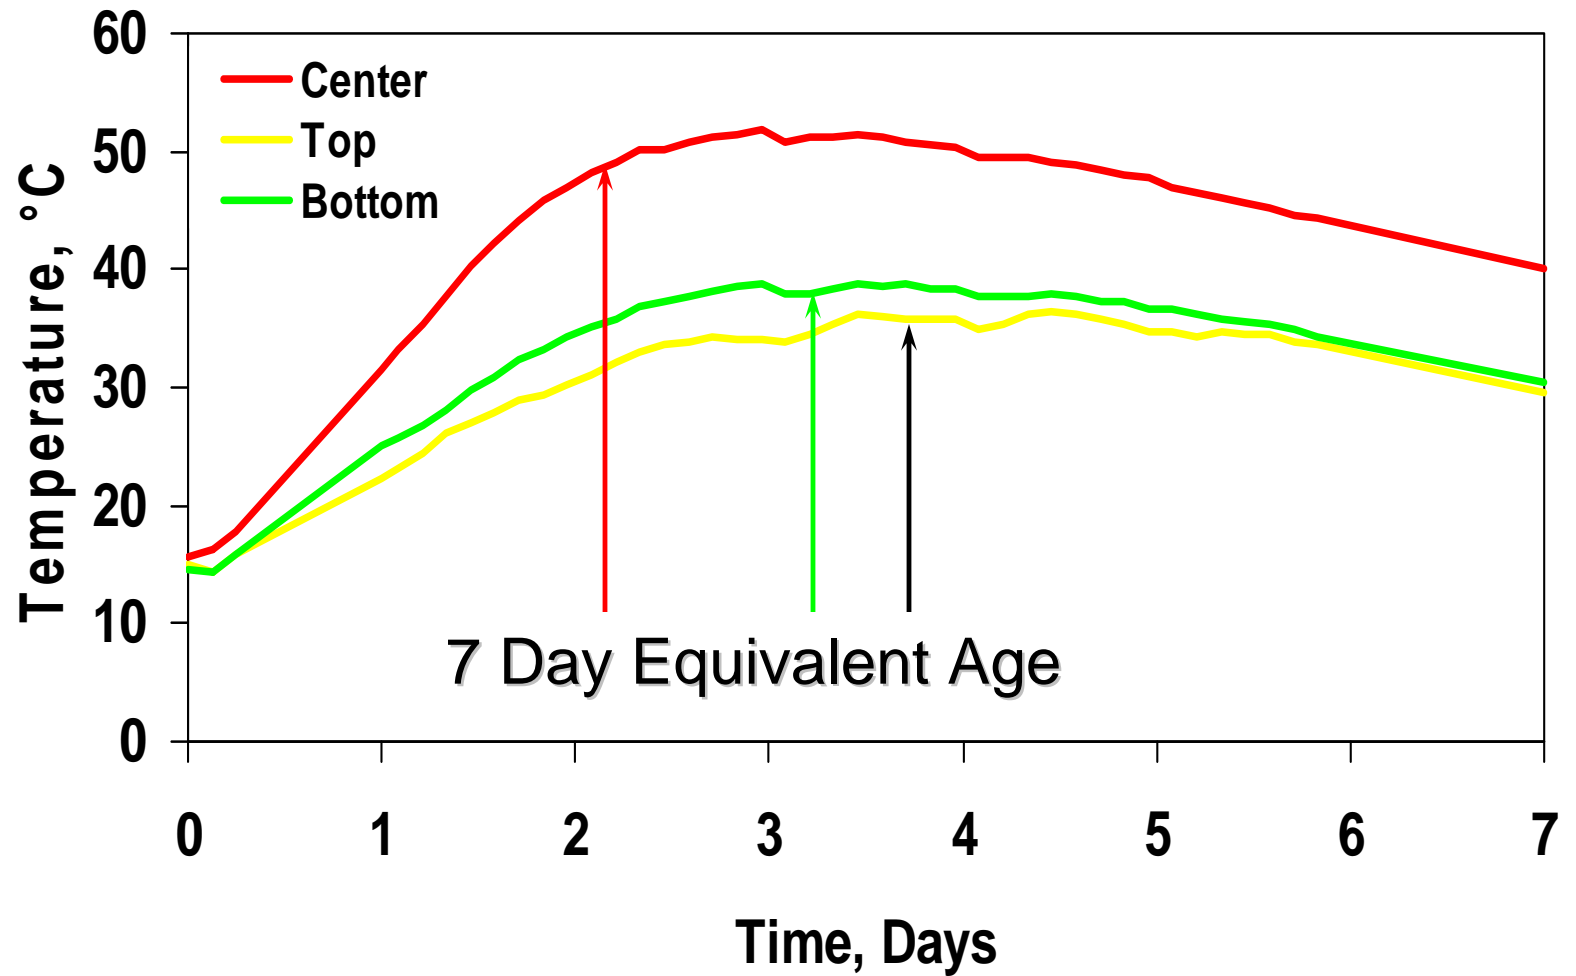

- Time-Temperature Factor (°F·hr)

$$M = \sum_{t=0}^t (T - T_o) \Delta t$$

- Equivalent Age (days)

$$M = \sum_{t=0}^t e^{-Q \left(\frac{1}{T_a} - \frac{1}{T_s} \right)} \Delta t$$

Footing Example

But...

- Maturity relation required for each mix
- Provides an estimate of a property based on indirect measurements

Calorimetry

- Measuring heat in paste mixtures to assess hydration kinetics
- i.e. How do system chemistry, admixtures and SCMS influence hydration
- Isothermal

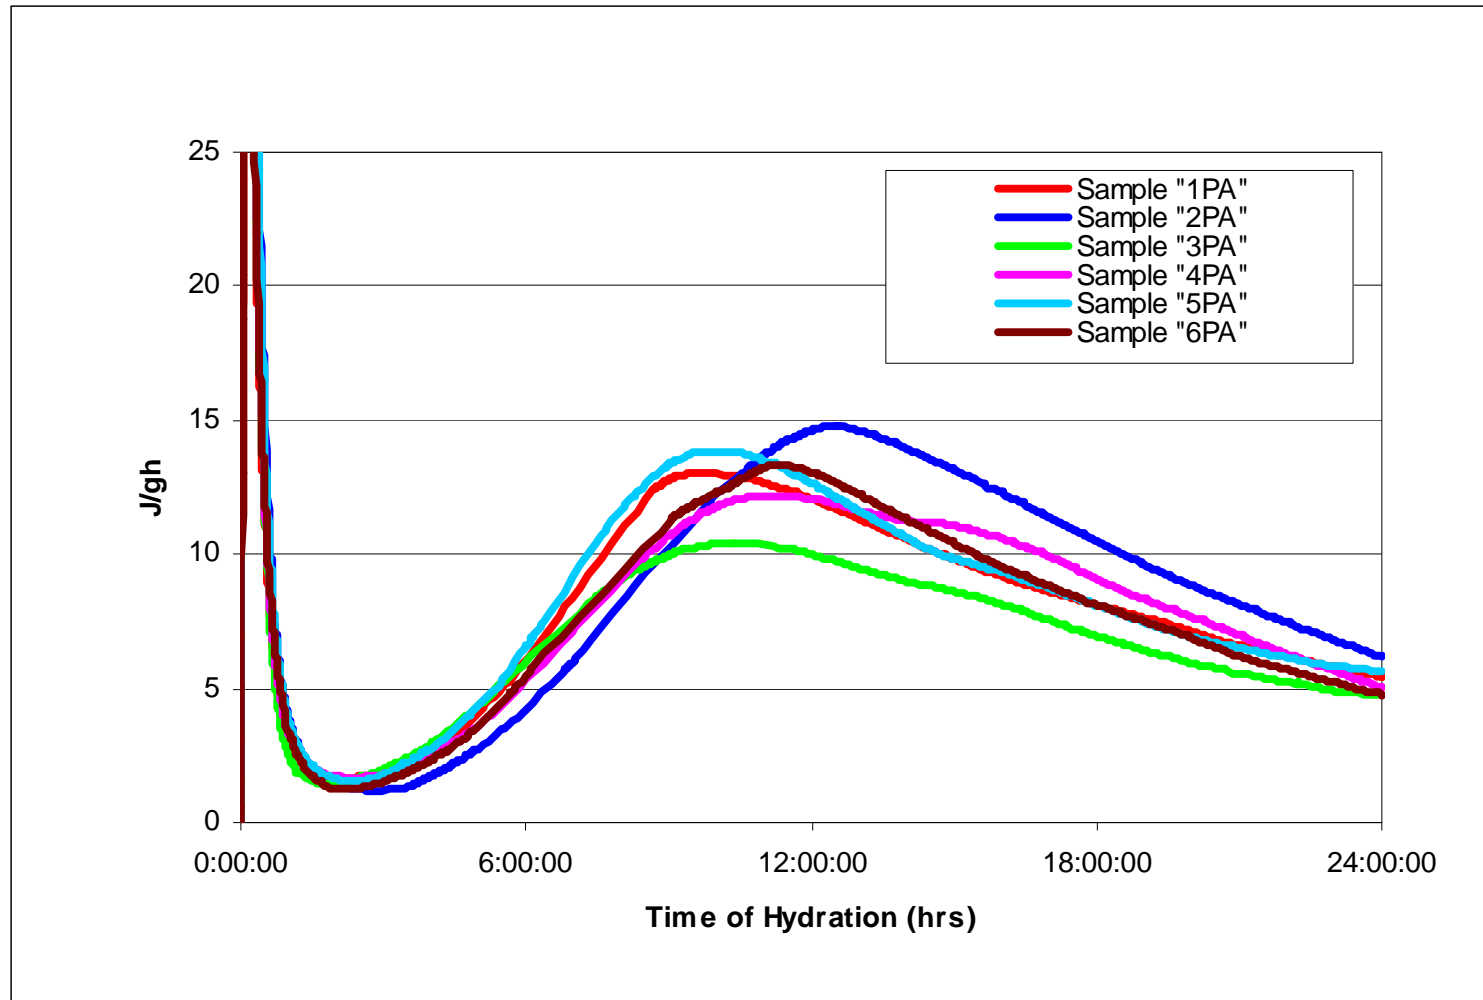

How?

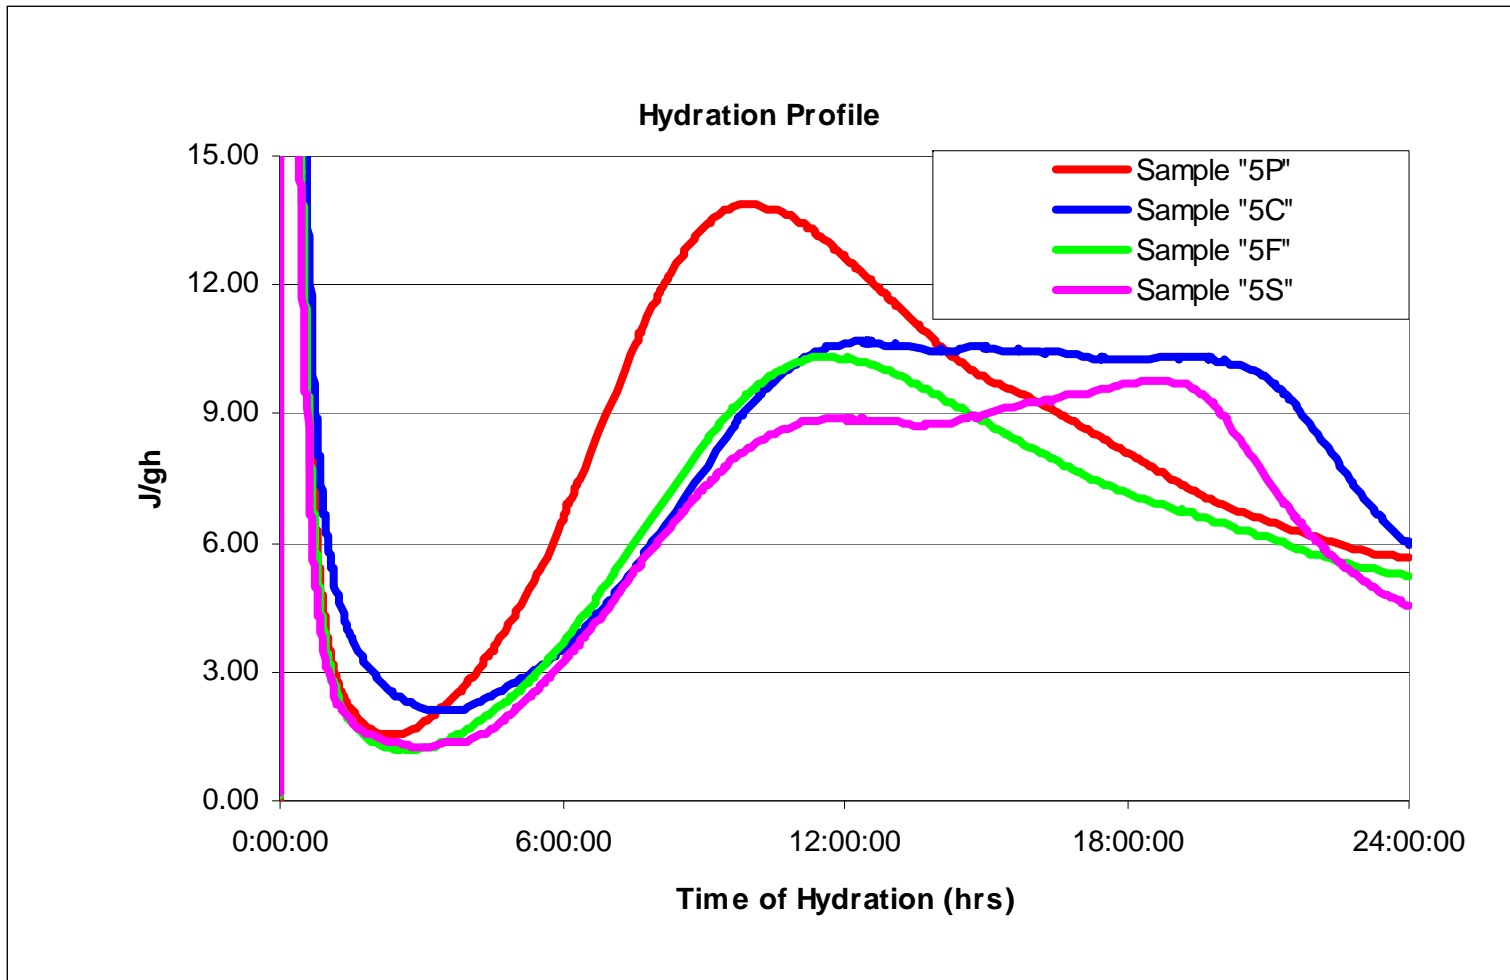

How?

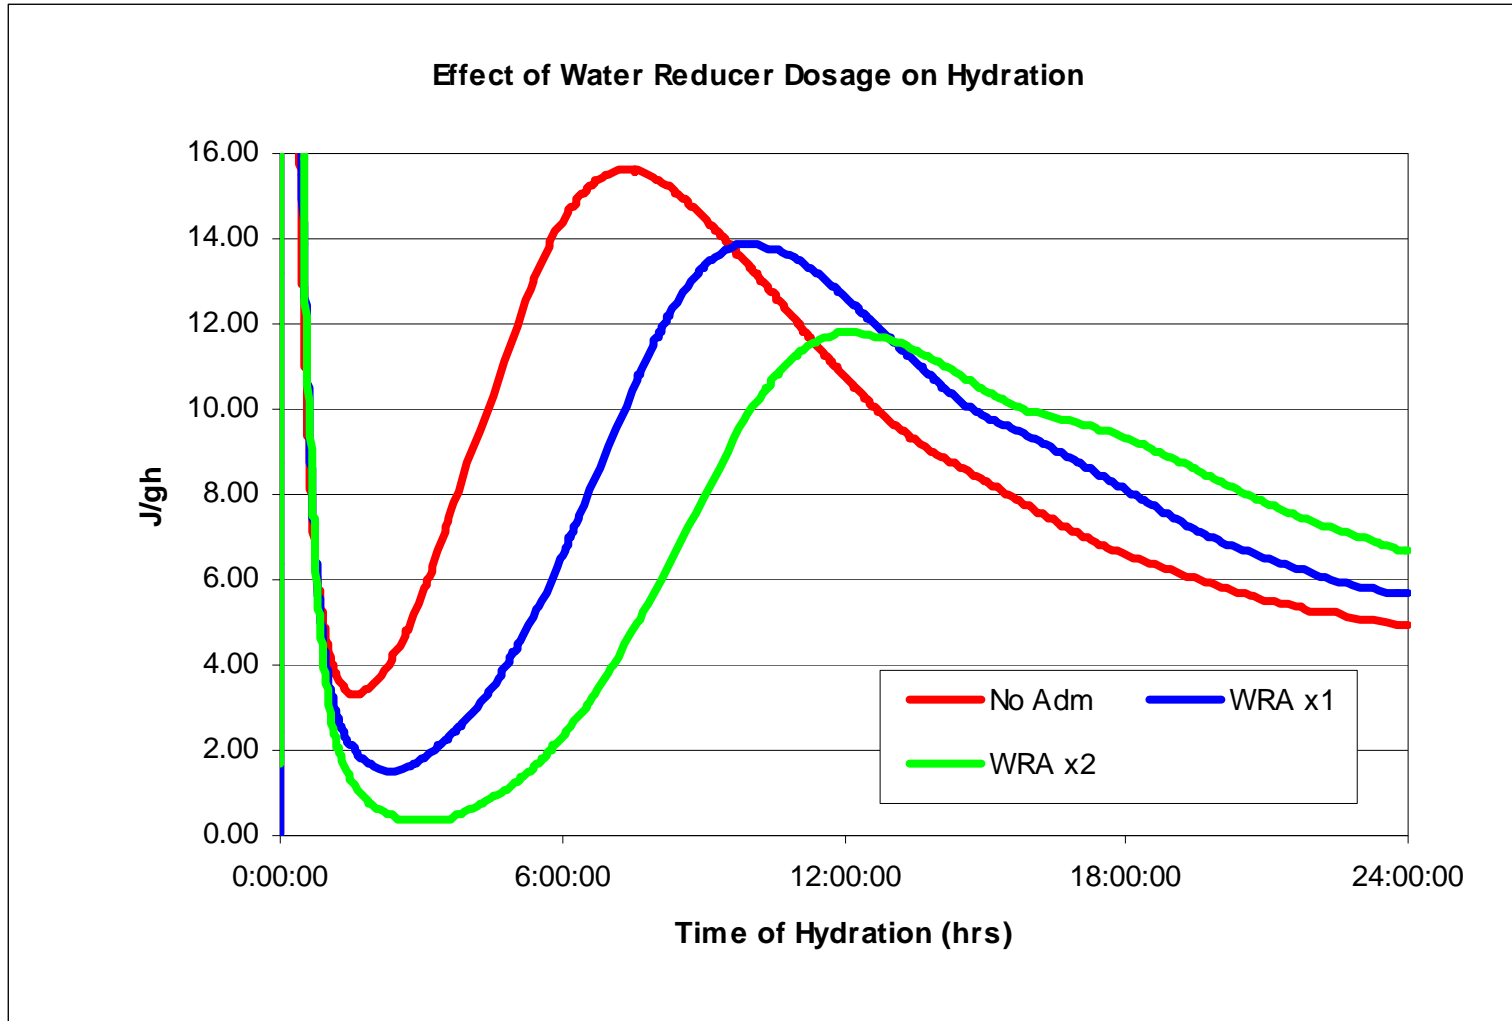

Why?

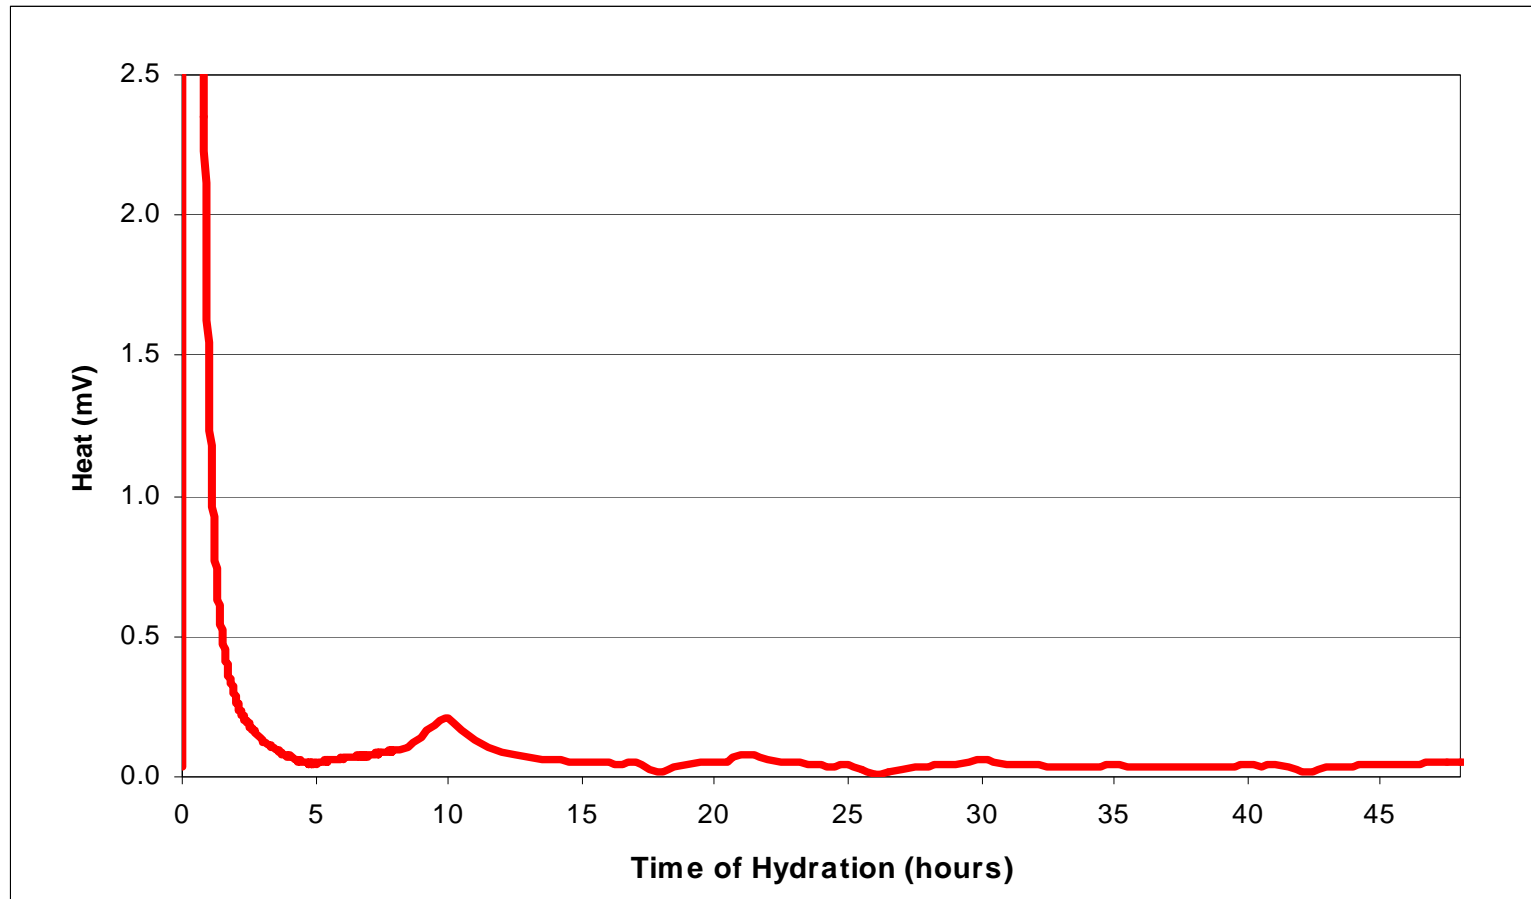

Why?

Why?

Why?

But...

- Small paste samples
- Fixed temperature
- May not flag all aluminate reaction problems
- Takes up to 24 hours
- Other techniques?

Field Semi-Adiabatic Calorimetry

- Measuring heat in mortar /concrete to assess hydration kinetics
- i.e. Is the system hydrating?
- Semi(ish) adiabatic

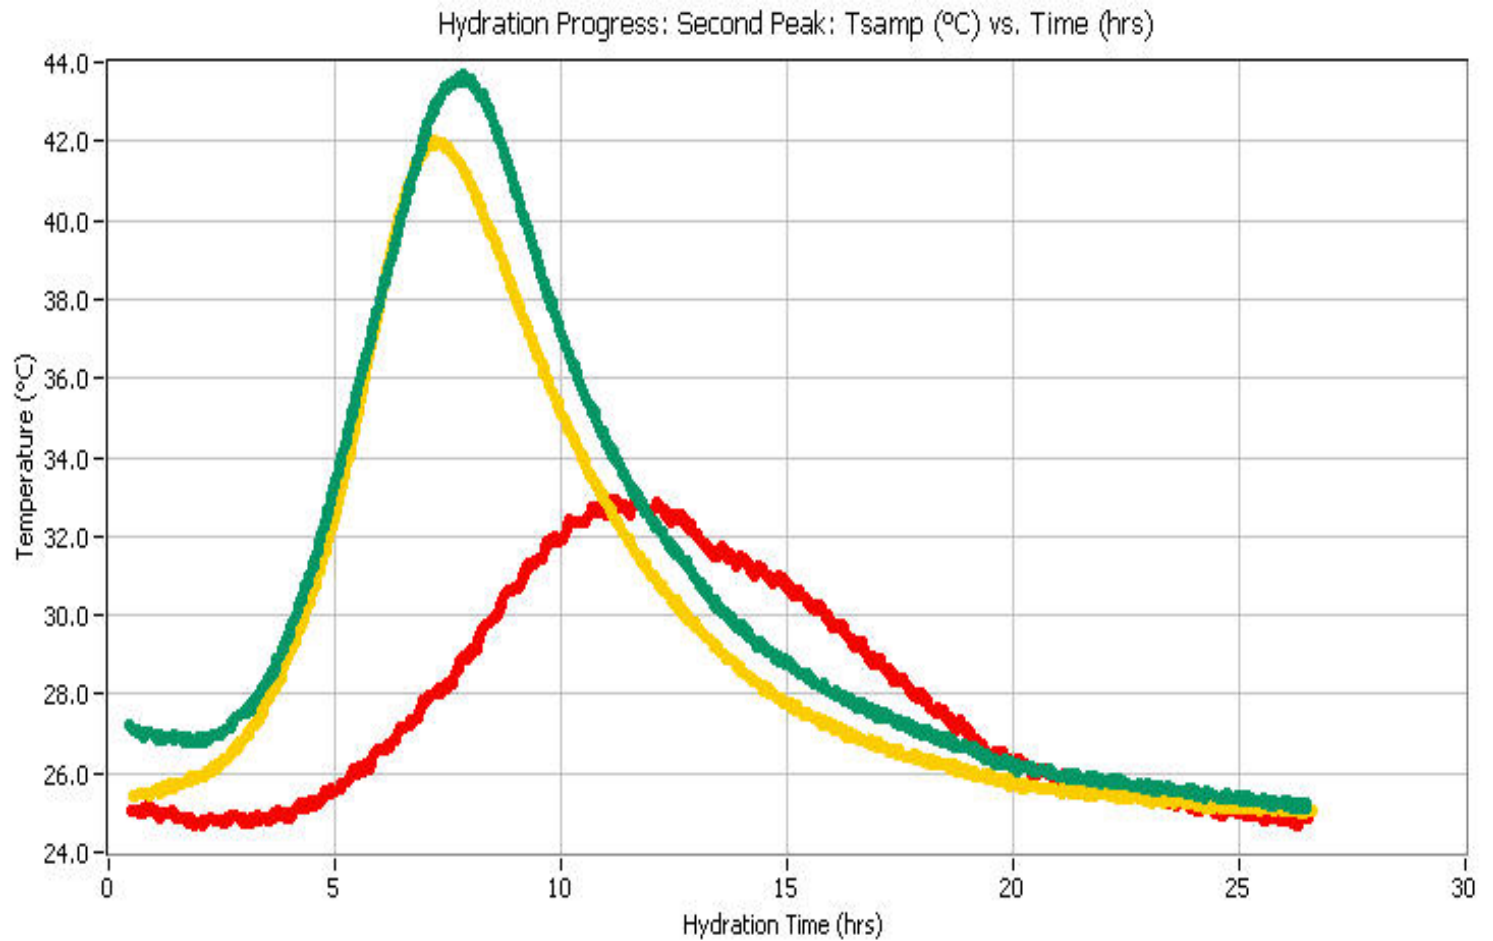

How?

Why?

Why?

But...

- Coarse
- Takes time

Heat of Hydration

- Measuring heat generated by a cementitious system (paste)
- Used for heat calculations in mass concrete
- Adiabatic / Semi adiabatic

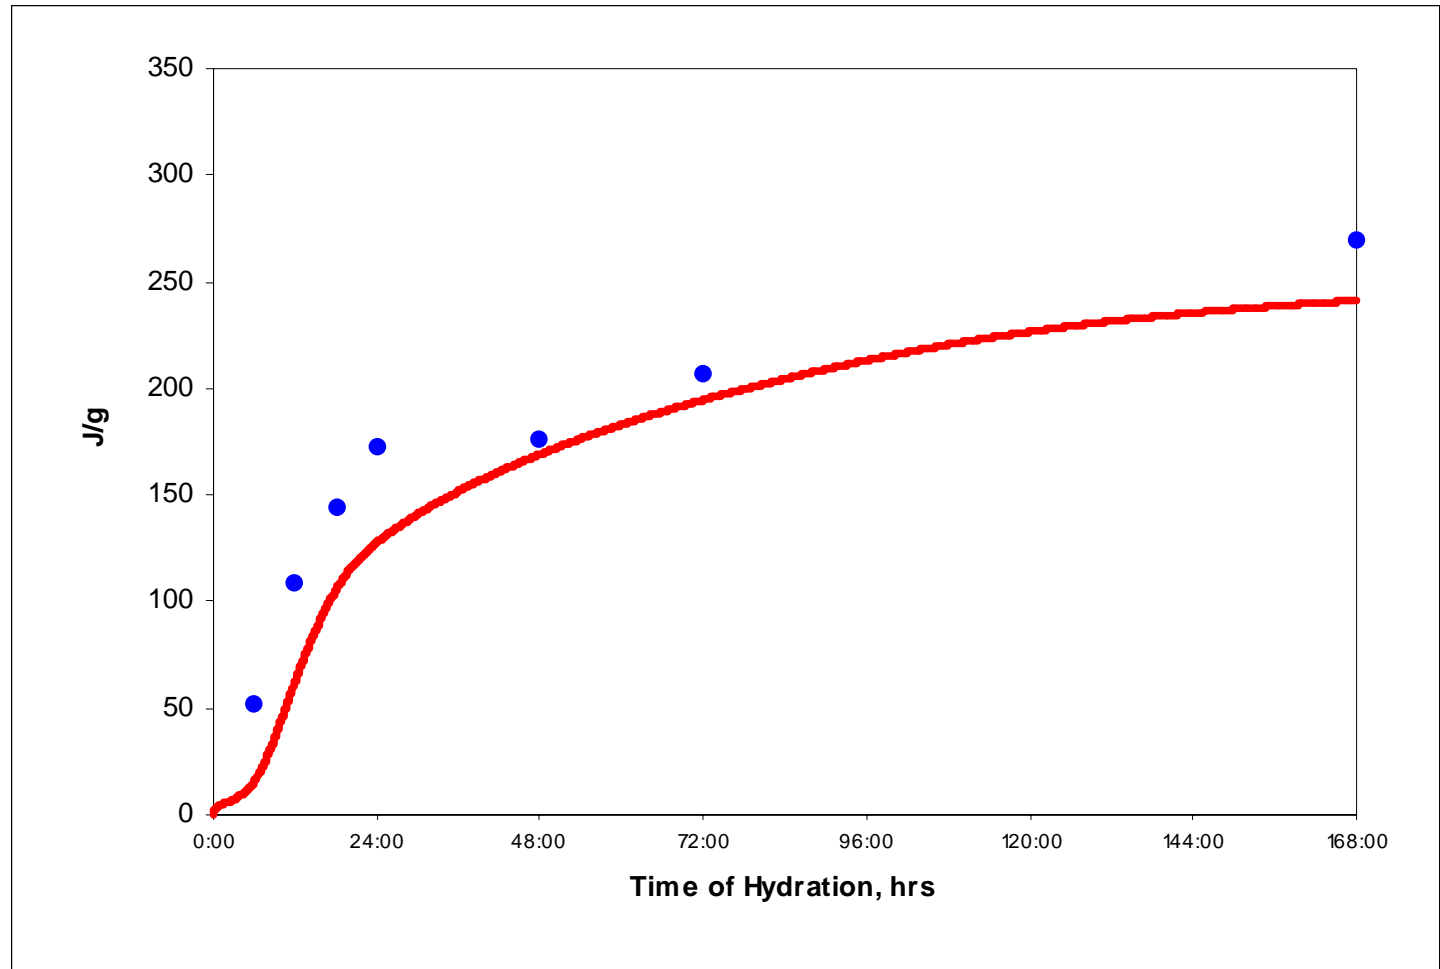

Why?

How?

How?

CTLGroup

But...

- Not standardized
 - yet

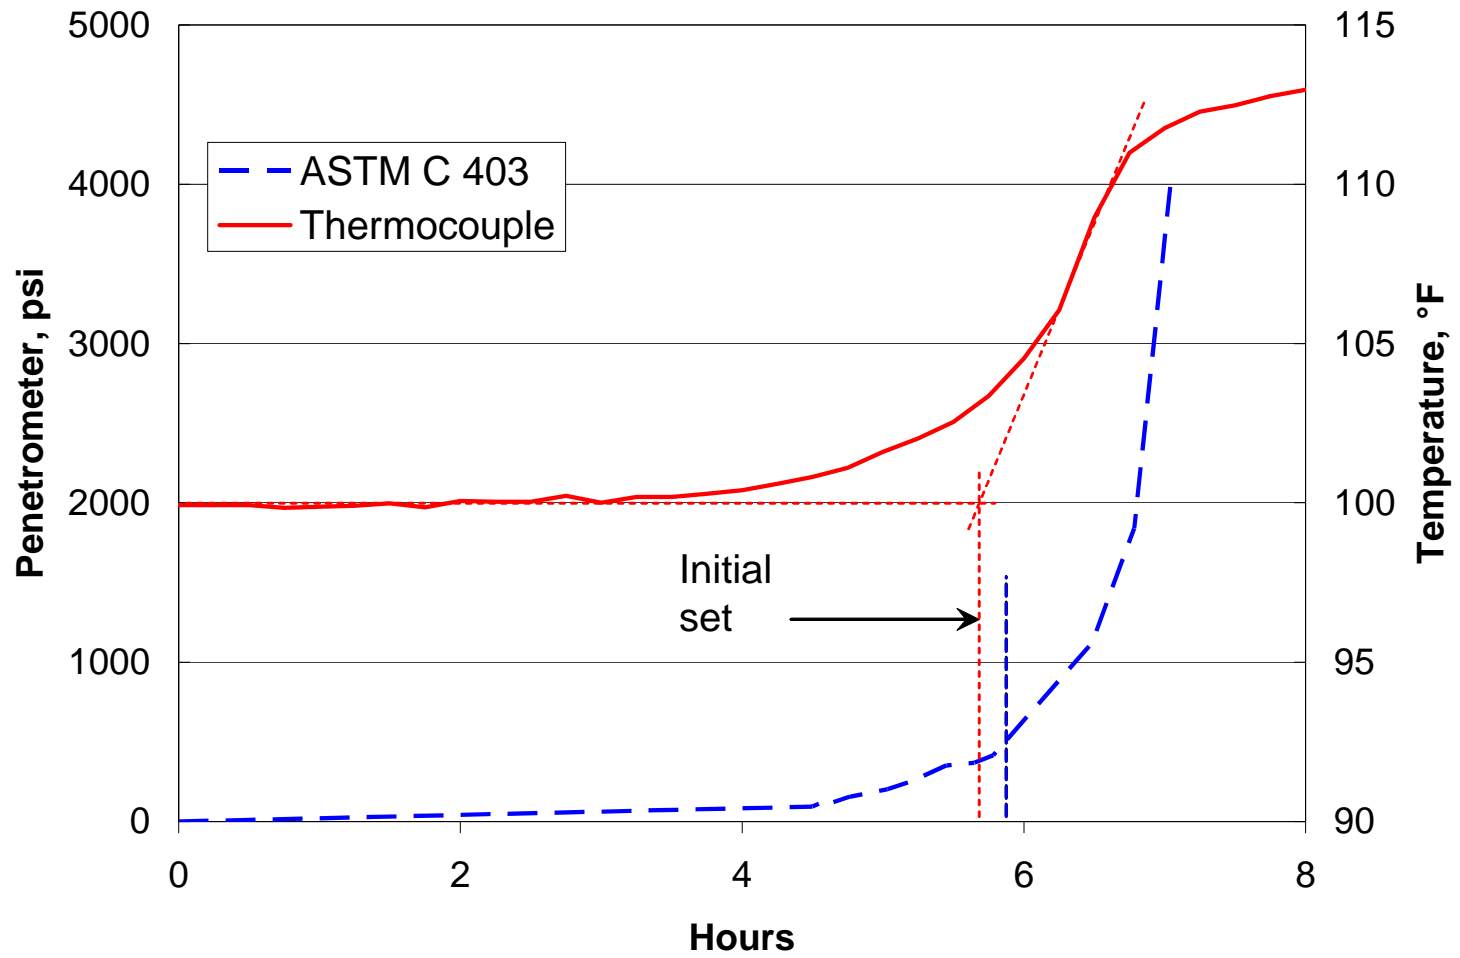

Time of Set

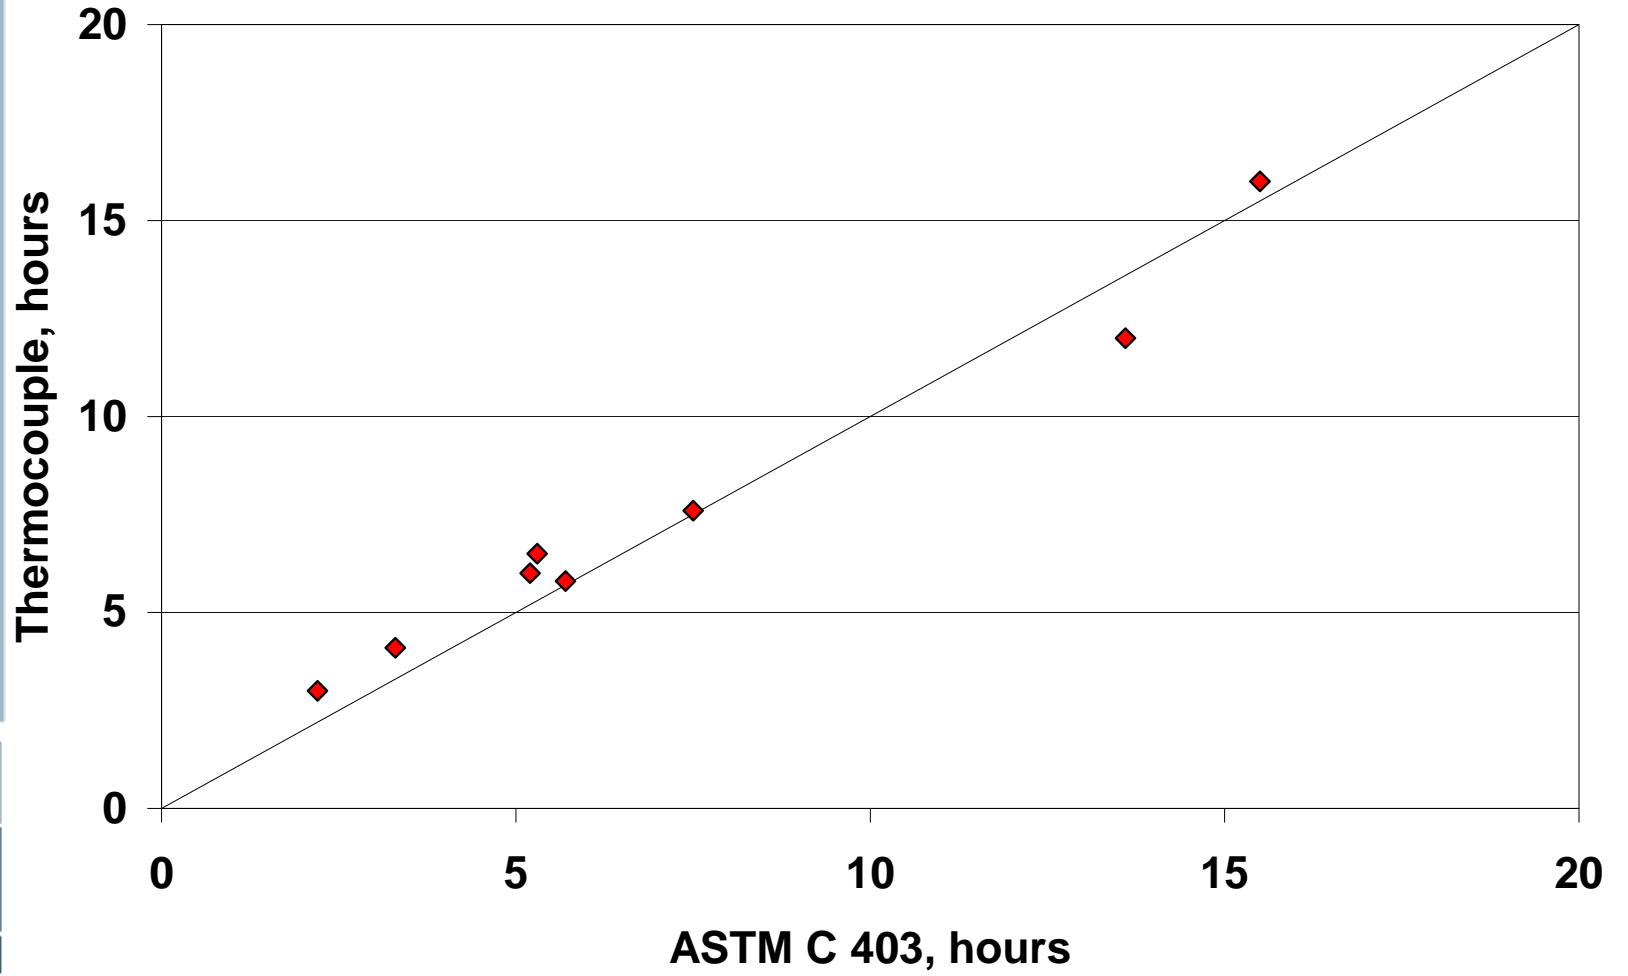

- Using temperature monitoring to measure time of set
- Semi-adiabatic

Why?

Initial Set

Summary

- Useful data can be collected
 - For characterizing materials
 - Investigating interactions
 - Tracking uniformity
 - Timing finishing activities
 - Tracking hydration
- Use the right equipment for the right application
