

National Road Research Alliance

Glenn Engstrom

Director, Office of Materials and Road Research, MnDOT, glenn.engstrom@state.mn.us

The National Road Research Alliance (NRRRA) goal is to improve the future sustainability of our roads through research and a commitment to cooperative implementation. The alliance sponsors research through a variety of methods including the MnROAD test track, one of the most sophisticated cold-weather pavement test facilities in existence. Our alliance consists of state DOTs, private companies, academic institutions and industry associations. Together, they make the decisions for construction of test sections, short and long-term research projects and implementation efforts.

The NRRRA is currently guided by 8 State DOT's and has 57 Associate members. The talk will describe the NRRRA's:

- Purpose and Philosophy
- Funding Mechanism
- Structure
- Membership
- Research Efforts
- Outreach and Events
- Future

Keywords: sustainability; National Road Research Alliance; cold-weather pavement; test facilities
