

## Concrete Mixture Proportioning

Peter Taylor

Director, CP Tech Center, ptaylor@iastate.edu

This presentation will review a mixture proportioning method, and tool that have been developed at Iowa State. The method takes into account the effect of aggregate gradation and density when selecting paste volume for workability, while selecting paste quality parameters to achieve long term performance. Some examples will be discussed where the tool has been used in the field leading to reduced cost and improved performance.

*Keywords:* mixture proportioning; past quality; concrete
