### DETECTABLE WARNING LOCATION AT RAILROAD CROSSING

#### Typical Section - Curb Ramp

1. **Perpendicular Curb Ramp**
   - Length varies
   - 6" min.
   - 6.25% (target), 8.3% (max.)

2. **Turning Space**
   - (4'-0"x4'-0" min.)

3. **Parallel Curb Ramp**
   - If required
   - 4" min.

4. **Standard Sidewalk**
   - Slope varies
   - 4" min.

When a KT or BT joint is installed at the back of curb, provide 1/2" expansion joint at front or back of the turning space.

- **Key**
  - Curb Ramp
  - Turning Space
  - Detectable warning

#### Skewed Crossing

- 12"
- 18"

#### Perpendicular Crossing

1. **24" Wide (min.)**
2. **Detectable Warning**
3. **Sidewalk**
4. **Edge of Pavement**
5. **Possible Crossing Arm**
6. **Location varies**
7. **C of Roadway**

**REVISION**

**SHEET 1 of 1**

**FIGURE 7030.205**

**SHED 1 OF 1**

**DETAIL A**

**SUDAS Standard Specifications**

**GENERAL SIDEWALK AND CURB RAMP DETAILS**

1. Provide a minimum 2 foot width of detectable warning surfaces in the direction of pedestrian travel across the full width of the curb ramp or turning space, exclusive of curbs or flares.
2. Provide a minimum of 6 inches of concrete below the detectable warning panel.
3. Minimum 4 feet by 4 feet. Target cross slope of 1.5% with a maximum cross slope of 2.0%.
4. If normal sidewalk elevation cannot be achieved with the perpendicular ramp between the street and landing due to limited ramp length, provide a parallel ramp to make up the elevation difference between the landing and the standard sidewalk.

The length of the parallel ramp is not required to exceed 15 feet, regardless of the resulting slope. Do not exceed 8.3% slope for parallel ramps shorter than 15 feet.

If crossing gate conflicts with location of detectable warning or if pedestrian crossing gate is provided, place detectable warning panel in advance of the crossing gate.

Locate front edge of detectable warning panel 12 to 15 feet from centerline of nearest rail. Orient truncated domes parallel to the direction of pedestrian travel.
