### **SECTION C - TRAFFIC CONTROL**

Bid Item Number	Item	Quantity	Unit
110E1400	Remove Pavement Marking, 4" or Equivalent	1,000	Ft
632E2220	Guardrail Delineator	6	Each
632E2510	Type 2 Object Marker Back to Back	1	Each
632E2530	Type 3 Object Marker	8	Each
632E3520	Remove, Salvage, Relocate, and Reset Traffic Sign	13	Each
632E3600	Temporary Signing	998.5	SqFt
634E0010	Flagging	100	Hour
634E0100	Traffic Control	9,163	Unit
634E0120	Traffic Control, Miscellaneous	Lump Sum	LS
634E0300	Temporary Road Marker	3,700	Each
634E0380	Tubular Marker	789	Each
634E0390	Replace Tubular Marker	40	Each
634E0420	Type C Advance Warning Arrow Panel	4	Each
634E0610	4" Temporary Pavement Marking Tape Type 2	3,480	Ft

### SECTION D - EROSION AND SEDIMENT CONTROL

Bid Item Number	Item	Quantity	Unit
110E1690	Remove Sediment	2.3	CuYd
110E1693	Remove Erosion Control Wattle	250	Ft
110E1700	Remove Silt Fence	875	Ft
120E9000	Pit Run Material	60.0	Ton
230E0100	Remove and Replace Topsoil	Lump Sum	LS
730E0212	Type G Permanent Seed Mixture	624	Lb
732E0100	Mulching	48.0	Ton
734E0040	Soil Stabilizer	3,600	Lb
734E0154	12" Diameter Erosion Control Wattle	1,000	Ft
734E0165	Remove and Reset Erosion Control Wattle	250	Ft
734E0602	Low Flow Silt Fence	1,000	Ft
734E0604	High Flow Silt Fence	2,500	Ft
734E0610	Mucking Silt Fence	245	CuYd
734E0620	Repair Silt Fence	875	Ft
831E0300	MSE Geotextile Fabric	95	SqYd
900E1300	Granular Material for Construction Entrance	60.0	Ton

### **SECTION E - STRUCTURES**

Bid Item Number	Item	Quantity	Unit
410E2600	Membrane Sealant Expansion Joint	125.6	Ft
430E0300	Granular Bridge End Backfill	49.3	CuYd
430E0510	Approach Slab Underdrain Excavation	55.5	CuYd
460E0070	Class A45 Concrete, Bridge Repair	1.3	CuYd
460E0150	Concrete Approach Slab for Bridge	190.6	SqYd
460E0160	Concrete Approach Sleeper Slab for Bridge	67.5	SqYd
460E0170	Concrete Patching Material	158.9	CuFt
460E0300	Breakout Structural Concrete	1.3	CuYd
460E0380	Install Dowel in Concrete	54	Each
460E0510	Extend Deck Drain	2	Each
480E0200	Epoxy Coated Reinforcing Steel	130	Lb
480E0504	No. 4 Rebar Splice	28	Each
480E0505	No. 5 Rebar Splice	51	Each
480E0506	No. 6 Rebar Splice	44	Each
491E0015	Two Coat Epoxy Bridge Deck Chip Seal	4,744.2	SqYd
491E0110	Abrasive Blasting of Bridge Deck	4,744.2	SqYd
491E0120	Bridge Deck Grinding	4,744.2	SqYd
491E0130	Concrete Removal, Class A	22.4	SqYd
491E0140	Concrete Removal, Class B	22.4	SqYd
680E0040	4" Underdrain Pipe	104	Ft
680E2010	Precast Concrete Headwall for Drain	2	Each
680E2500	Porous Backfill	11.7	Ton

### **SEQUENCE OF OPERATIONS**

The Contractor shall submit any proposed alternates to the following sequence for the Engineer's approval at least two weeks prior to the preconstruction meeting.

### Phase I

Install fixed location Road Work Ahead(W20-1), Road Work Next \_\_\_ Miles(G20-1) and End Road Work(G20-2) signs.

Install lane closure at traffic control temporary crossover locations.

Construct traffic control temporary crossovers at Sta. 366+00 and Sta. a439+00. Install over-width signing.

Install shoulder delineation.

Install bridge end protection in EBL (moveable concrete barriers and guardrail).

### Phase II

Remove conflicting pavement markings.

Install channeling devices and temporary road markers to separate two-way traffic on the Eastbound lanes.

Eastbound lanes - repaint existing white and yellow edge line. Existing yellow edge line to be painted white.

### Phase III

Maintain two-way traffic on Eastbound lanes while constructing Westbound lanes. Complete Structure Work (Approach Slabs, Joints and Epoxy Chip Seal).

### Phase IV

Accomplish shoulder shaping to the typical section. Install permanent pavement markings on the reconstructed Westbound lanes. Install permanent signing and delineation. Perform erosion control.

### Phase V

Restore Westbound traffic to reconstructed Westbound lanes.

Remove two way traffic delineation and shoulder delineation.

Remove over-width signing. Remove Bridge-end and median protection.

Install permanent pavement markings on Eastbound lanes within project limits. Remove all fixed location construction signing.

### **MAINTENANCE OF TRAFFIC**

Removing, relocating, covering, salvaging and resetting of permanent traffic control devices, including delineation, shall be the responsibility of the Contractor. The cost of this work shall be incidental to the various contract bid items unless otherwise specified in the plans. Any delineators and signs damaged or lost shall be replaced by the Contractor at no cost to the State.

Storage of vehicles and equipment shall be as near the right-of-way as possible. Contractor's employees should mobilize at a location off the right-of-way and arrive at the work sites in a minimum number of vehicles necessary to perform the work. Indiscriminate driving and parking of vehicles within the right-of-way will not be permitted. Any damage to the vegetation, surfacing, embankment, delineators and existing signs resulting from such indiscriminate use shall be repaired and/or restored by the Contractor, at no expense to the State, and to the satisfaction of the Engineer.

The Contractor's employee vehicles will not be allowed to park in the US 12 median at any time.

Work activities during non-daylight hours are subject to prior approval.

The bottom of signs on portable or temporary supports shall not be less than seven feet above the pavement in urban areas and one foot above the pavement in rural areas. Portable sign supports may be used as long as the duration is less than 3 days. If the duration is more than 3 days the signs shall be on fixed location, ground mounted, breakaway supports.

The Contractor shall provide documentation that all breakaway sign supports comply with FHWA NCHRP Report 350 or MASH crash-worthy requirements. The Contractor shall provide installation details at the preconstruction meeting for all breakaway sign support assemblies.

The public access median crossovers located within the project limits for field and unimproved section line roads shall be blocked off by the use of a Type III Barricade (double sided) and a Road Closed sign. The barricades shall be located outside of the traffic lane clear zone (30' minimum from yellow edge line). The following locations meet the above requirements:

MRM	MRM	MRM	MRM
298.08	299.62	301.30	305.27
298.71	300.08	302.52	306.49
299.16	300.25	303.33	
299.45	300.53	303.51	
299.59	301.19	304.30	

All temporary pavement markings in the traffic control temporary crossovers shall be Temporary Road Markers. Refer to Section M for pavement marking requirements during two-way head to head traffic for the EBL in between the 2 traffic control temporary crossovers.

Temporary marking used by the Contractor shall be completely removed upon completion of the project or as project conditions warrant. The cost of removal shall be incidental to the contract unit price per each for "Temporary Road Marker".

The Contractor will be required to change the yellow delineators located on the median side of the EBL Structures to white before two way traffic is allowed. The Contractor shall return these delineators to yellow upon completion of two way traffic. All costs for changing delineators shall be incidental to the contract lump sum price for "Traffic Control, Miscellaneous".

The Contractor will be required to install R4-7 Keep Right symbol, W6-3 Two Way Traffic symbol, R2-1 SPEED LIMIT 55, and R4-1 DO NOT PASS signs as indicated on the Sign Layout at Intersecting Roads. The W6-3, R2-1 and R4-1 signs shall also be installed in both directions at approximately MRM 301.5.

The Contractor will be required to furnish and install Type 3 Object Markers on both ends of both structures before two-way traffic is allowed. The cost to furnish, install, maintain, and remove the Type 3 object markers shall be incidental to the contract unit price per each for "Type 3 Object Marker".

Included in the Estimate of Quantities is 6 Guardrail Delineator and 1 Type 2 Object Marker Back to Back for use on the traffic control temporary guardrail for Str. No. 07-222-330. Refer to Standard Plate 632.40 in the Section S plans for installation requirements.

Upon completion of the project and removal of signs, breakaway bases shall be pulled immediately.

For information only, it is estimated that 200 white and 3500 yellow temporary road markers will be required as illustrated on Standard Plate 634.66

STATE OF	PROJECT	SHEET NO.	TOTAL SHEETS
SOUTH DAKOTA	NH 0012(160)298	C2	C15

### **TUBULAR MARKER FOR TWO-WAY TRAFFIC**

The Engineer shall inspect and approve the tubular marker for use prior to the marker being installed on the project. The tubular marker shall be in reasonably close conformance with the following specifications. The tubular marker shall be a minimum of 28" in height, 3" to 4" in width, and yield upon vehicular impact.

The color of the tubular marker shall be predominately orange.

All tubular markers shall be of the same size and type. Reflectorization of the tubular markers shall be a minimum of two, three-inch wide white bands; the first placed a maximum of 2 inches from the top with a maximum of 6 inches between the bands. The reflectorized material shall be adequately attached to the marker to prevent peeling or detachment.

The tubular marker shall provide adequate nighttime reflectivity.

The base of the Tubular Marker should be attached to the roadway surface with a flexible non-permanent bituminous adhesive capable of being removed from the roadway surface after use, or with an adhesive approved by the Engineer. The pin used to connect the marker to the base shall be of a type that will not puncture a vehicle tire if it should become dislodged from the base. The cost to furnish, install, maintain, and remove the tubular markers shall be incidental to the contract unit price per each for "Tubular Marker".

For information only, it is estimated that 578 Tubular Markers will be required to delineate Two-Way Traffic.

### **OVERWIDTH SIGNING**

The Contractor shall furnish and install overwidth signs as shown in the plans. All costs to furnish, install, maintain and remove the signs shall be incidental to the contract unit price per Square Foot for "Temporary Signing".

When the overwidth signing is not required, the installed signs shall be covered or deactivated by an alternate method approved by the Engineer. If the signs are covered, the covering shall completely prevent viewing of the sign. The signs shall be removed during long periods of deactivation.

### SPECIAL SHOULDER DELINEATION

Special shoulder protection shall be installed on both shoulders of the Eastbound lanes throughout the entire length of two-way, head to head traffic.

Shoulder protection shall consist of installing tubular markers 3 feet from the edge of the driving lane at 500' intervals. Tubular markers for shoulder delineation shall be of the same size and type as defined in section TUBULAR MARKER FOR TWO-WAY TRAFFIC of these plans.

All costs to furnish, install, maintain and remove the tubular markers shall be incidental to the contract unit price per each for "Tubular Marker".

For information only, it is estimated that 186 Tubular Markers will be required for this purpose.

### SPECIAL CENTERLINE DELINEATION

Special centerline delineation shall be installed on the centerline of the WBL from approximately Sta. 359+65 (East entrance to Northern Rural Electric) to Sta.376+50 (395<sup>th</sup> Ave).

Centerline delineation shall consist of installing tubular markers on centerline as depicted on Sheet 2 of 3 of the detail CROSSOVER LAYOUT AT BATH. Tubular markers for centerline delineation shall be of the same size and type as defined in section TUBULAR MARKER FOR TWO-WAY TRAFFIC of these plans.

All costs to furnish, install, maintain and remove the tubular markers shall be incidental to the contract unit price per each for "Tubular Marker".

For information only, it is estimated that 25 Tubular Markers will be required for this purpose.

### **REMOVAL OF EXISTING PAVEMENT MARKINGS**

The Contractor shall remove the 4" solid yellow edge line(s) and the 4" White centerline skips in traffic merging areas. Limits of removal shall be determined in the field by the Engineer.

All costs to remove existing skip line and edge line shall be incidental to the contract unit price per foot for "Remove Pavement Marking, 4" or Equivalent".

It is estimated that 1000 feet of 4" pavement marking paint will be removed from the centerline and edge lines.

### **REMOVAL OF CONFLICTING SIGNS**

Section S of the plans contains a listing of signs to be removed. All One Way, Do Not Enter, Wrong Way, Divided Highway Crossing, and Speed Limit signs listed in Section S shall be removed when there is head to head traffic on this project. There will be no additional payment for removing these signs, other than the method of payment noted in Section S of the plans. Stop and Yield signs shall remain in place.

Additional signing near 395<sup>th</sup> Ave intersection requires removal. Those signs are as listed in the following table. All costs associated with removing these signs at the start of two-way head to head traffic and replacement at the end of the project shall be incidental to the contract unit price per each for "Remove, Salvage, Relocate, and Reset Traffic Sign".

MRM	Lt/Rt	<u>Sign</u> Description	Location
297.93	Rt	Do Not Enter	Sign on back side of Sand Lake National Wildlife Refuge sign
297.93	Lt	One Way	Sign on West side of Median
297.94	Rt	One Way	Sign on south inslope of US12 EBL
297.94	Lt	One Way	One Way Sign on East side on Median. Only remove sign facing south.
297.98	Lt	Wrong Way	Sign in Median facing East
298.01	Rt	Do Not Enter	Sign in SW quardrant of the 395 Ave Intersection
298.02	Lt	One Way	Sign on West side of Median. Only remove sign facing south
		One Way	Sign located in SE Quardrant of Intersection facing South
298.04	Rt	One Way	Sign located in SE Quardrant of Intersection facing North
200101		Divided Highway Crossing Symbol	Sign located in SE Quardrant of Intersection facing South
298.04	Lt	One Way	One Way Sign on East side on Median. Only remove sign facing south.
298.06	Rt	Do Not Enter	Sign on back side of Adopt A Highway sign
298.08	Lt	One Way	Sign in Median facing East

It will be allowable to cover these signs for up to 3 calendar days after the beginning of two-way head to head traffic, to allow the Contractor time to remove those signs. The covering shall be such that the entire sign is covered and the cover shall prevent any image of the sign from being viewed.

### **4" TEMPORARY PAVEMENT MARKING TAPE, TYPE 2**

Included in the Section C Estimate of Quantities is 3,480 feet of Yellow 4" Temporary Pavement Marking Tape for use on the lane closures as depicted on Standard Plate 634.64. These closures shall be in place during construction of the traffic control temporary crossover at Sta. 366+00 and Sta. a439+00.

### **REMOVE AND REPLACE TOPSOIL**

Prior to beginning surfacing operations, a 4" depth of topsoil shall be bladed down the respective inslopes and left in a windrow 11'+/- from the subgrade shoulder. Following completion of resurfacing operations, topsoil shall be bladed back up the inslope to the point indicated on the typical section.

Topsoil shall also be salvaged and stockpiled prior to constructing the following: culvert resets, median crossover, and guardrail embankment area(s). Limits of this work, depth of salvage, and stockpile location will be directed by the Engineer. Following completion of construction, topsoil shall be spread evenly over the disturbed areas.

The estimated amount of topsoil to be removed and replaced is 12,680 CuYd.

All cost associated with removing and replacing the topsoil along areas to be resurfaced shall be incidental to the lump sum price for "Remove and Replace Topsoil".

### <u>DRILLS</u>

In addition to the drills specified in Section 730 of the Standard Specifications, other types of drills including no-till drills will be allowed as long as they have baffles, partitions, agitators, or augers which keep the seed distributed throughout the seed box and the seed is planted at a depth of  $\frac{1}{4}$ " to  $\frac{1}{2}$ ".

### FERTILIZING

Application of fertilizer will not be required on this project.

### PERMANENT SEEDING

The areas to be seeded comprise of all newly graded areas within the project limits except for the top of roadways.

All permanent seed shall be planted in the topsoil at a depth of  $\frac{1}{4}$ " to  $\frac{1}{2}$ ". All seed broadcast must be raked or dragged in (incorporated) within the top  $\frac{1}{4}$ " to  $\frac{1}{2}$ " of topsoil when possible. This requirement may be waived by the Engineer during construction when raking or dragging is deemed not feasible by conventional methods.

Type G Permanent Seed Mixture shall consist of the following:

Grass Species	Variety	Pure Live Seed (PLS) (Pounds/Acre)
Western Wheatgrass	Flintlock, Rodan, Rosana	7
Switchgrass	Dacotah, Forestburg, Nebraska 28, Pathfinder, Summer, Sunburst, Trailblazer	3
Indiangrass	Holt, Tomahawk	3
Big Bluestem	Bison, Bonilla, Champ, Pawnee, Sunnyview	3
Oats or Spring Wheat: April through May;		10
Winter Wheat: August through November		
	Total:	26

### MULCHING (GRASS HAY OR STRAW)

Bales with noxious weed contamination will be rejected and the Contractor will be required to remove the contaminated bales from the project.

Straw may be placed before seeding to temporarily stabilize the site.

### SOIL STABILIZER

An estimated quantity of 3,600 pounds of soil stabilizer has been included in the Estimate of Quantities. The soil stabilizer shall be applied on areas deemed necessary by the Engineer to prevent wind and water erosion.

The Contractor shall apply soil stabilizer according to the manufacturer's application instructions and at the rate specified in the list of approved soil stabilizers.

Wood fiber mulch that contains a green dye shall be mixed with the soil stabilizer to be used as a tracer when the soil stabilizer is applied hydraulically. Wood fiber mulch shall be added at a rate of 300 pounds per acre to all of the approved soil stabilizers listed in the table except for the Pam-12 Plus product. The wood fiber mulch shall be a 100% wood fiber product and does not need to contain a tackifier.

All costs for furnishing and applying the soil stabilizer including wood fiber mulch, hauling, materials, equipment, labor, and incidentals necessary shall be paid for at the contract unit price per pound for "Soil Stabilizer".

The soil stabilizer sha

### STABILIZED CONSTRUCTION ENTRANCE

The Contractor shall install a Construction Entrance as shown on the Construction Entrance detail at locations where a potential for mud tracking and sediment flow from construction sites and work areas to paved public roadways exist.

The Contractor shall maintain the construction entrance such that mud tracking and sediment flow will not enter the roadway or adjacent drainage areas. The construction entrance shall be routinely inspected and the Contractor shall repair or replace material as deemed necessary by the Engineer.

It is anticipated that granular material will need to be periodically removed and replaced as it becomes inundated with mud and sediment. The Contractor shall be compensated for all granular material necessary to reestablish a clean granular material. All costs for disposal of inundated granular material shall be incidental to the various bid items.

No additional payment will be made for salvaged and reused material. All incidentals necessary to construct, maintain, and remove the construction entrance shall be incidental to the various bid items used for the construction entrance. Quantities are based on one construction entrance. Actual quantities shall be determined during construction.

### PIT RUN MATERIAL FOR CONSTRUCTION ENTRANCE

Pit run material shall be obtained from a granular source and shall conform to the following gradation:

Sieve Size	Percent Passing
6"	100%
#4	0-60%
#200	0-20%

Pit run material for the construction entrance shall be compacted to the satisfaction of the Engineer.

Pit run material shall be paid for at the contract unit price per ton. Payment shall be full compensation for furnishing and placing materials, labor, equipment, and all incidentals required.

### MSE GEOTEXTILE FABRIC FOR CONSTRUCTION ENTRANCE

The geotextile shall conform to Section 831 of the Standard Specifications. The geotextile shall be on the Approved Products List for this material or will be certified by the supplier to meet this specification prior to installation.

The geotextile should be kept as taut as possible prior to placing.

Equipment shall not be allowed on the geotextile until the first lift of granular material is in place.

All seams in the geotextile shall be overlapped at least 2 feet and shingled.

Geotextile shall be paid for at the contract unit price per square vard for "MSE Geotextile Fabric". Payment quantities shall be based on the area covered plus 15%. Overlaps are accounted for in the additional 15%. Payment shall be full compensation for furnishing and installing the geotextile only.

### **GRANULAR MATERIAL FOR CONSTRUCTION ENTRANCE**

Granular material shall be placed in 6 inch maximum lifts.

Aggregate for granular material shall conform to the following gradation requirements:

Sieve Size	Percent Passing
3"	100%
2 1⁄2"	90-100%
1 1⁄2"	25-60%
3⁄4"	0-10%
1/2"	0-5%

Granular material will be paid for at the contract unit price per ton for "Granular Material for Construction Entrance". Payment shall be full compensation for furnishing and placing materials, labor, equipment, and all incidentals required.

### **EROSION CONTROL WATTLE**

Erosion control wattles for restraining the flow of runoff and sediment shall be installed at locations noted in the table and at locations determined by the Engineer during construction. Refer to Standard Plate 734.06 for details.

### **EROSION CONTROL WATTLE** (continued)

The Contractor shall provide certification that the erosion control wattles do not contain noxious weed seeds.

A quantity of 1000 feet of 12" Diameter Erosion Control Wattles has been included in the Estimate of Quantities for temporary erosion and sediment control. Wattles may be left in place to decompose if used as part of final stabilization.

### **REMOVE EROSION CONTROL WATTLE**

Erosion control wattles shall be removed when vegetation is established. Some or all of the erosion control wattles may be left on the project until vegetation is established.

### **REMOVE AND RESET EROSION CONTROL WATTLE**

Erosion control wattles may be removed and reset as necessary as work progresses. The erosion control wattles removed and reset shall be in useable condition. All costs for removing and resetting the erosion control wattles shall be incidental to the contract unit price per foot for "Remove and Reset Erosion Control Wattle".

### LOW FLOW SILT FENCE

The low flow silt fence fabric provided shall be from the approved product list. The approved product list for low flow silt fence may be viewed at the following internet site:

Low flow silt fence shall be placed at the locations noted in the table and at locations that will minimize siltation of adjacent streams, lakes, dams, or drainage areas as determined by the Engineer during construction. Refer to Standard Plate 734.04 for details.

### **HIGH FLOW SILT FENCE**

The high flow silt fence fabric provided shall be from the approved product list. The approved product list for high flow silt fence may be viewed at the following internet site:

High flow silt fence shall be placed at the locations noted in the table and at locations that will minimize siltation of adjacent streams, lakes, dams, or drainage areas as determined by the Engineer during construction. Refer to Standard Plate 734.05 for details.

2,500 feet of high flow silt fence has been included in the Estimate of Quantities for temporary sediment control.

### **MUCKING SILT FENCE**

Mucking silt fence shall consist of removing muck trapped by the silt fence and spreading the material evenly over the adjacent area to conform to the existing grade.

### **REMOVE SILT FENCE**

Silt fence shall be removed when vegetation is established. Some or all of the silt fence may be left on the project until vegetation is established.

- Other:

### Wetland Avoidance $\geq$

Will construction and/or erosion and sediment controls impinge on regulated wetlands? Yes No X If yes, the structural and erosion and sediment controls have been included in the total project wetland impacts and have been included in the 404 permit process with the USACE.

Storm Water Management (4.2 2.b., (1) and (2))  $\geq$ 

Storm water management will be handled by temporary controls outlined in "EROSION AND SEDIMENT CONTROLS" above, and any permanent controls needed to meet permanent storm water management needs in the post construction period. Permanent controls will be shown on the plans and noted as permanent.

Other Storm Water Controls (4.2 2.c., (1) and (2))  $\geq$ 

### Waste Disposal

All liquid waste materials will be collected and stored in sealed metal containers approved by the project engineer. All trash and construction debris from the site will be deposited in the approved containers. Containers will be serviced as necessary, and the trash will be hauled to an approved disposal site or licensed landfill. All onsite personnel will be instructed in the proper procedures for waste disposal, and notices stating proper practices will be posted in the field office. The general contractor's representative responsible for the conduct of work on the site will be responsible for seeing waste disposal procedures are followed.

Hazardous Waste

All hazardous waste materials will be disposed of in a manner specified by local or state regulations or by the manufacturer. Site personnel will be instructed in these practices, and the individual designated as the contractor's on-site representative will be responsible for seeing that these practices are followed.

Sanitary Waste

Portable sanitary facilities will be provided on all construction sites. Sanitary waste will be collected from the portable units in a timely manner by a licensed waste management contractor or as required by any local regulations.

### Maintenance and Inspection (4.2 3. and 4.2 4.)

> Maintenance and Inspection Practices

Inspections will be conducted at least one time per week and after a storm event of 0.50 inches or greater.

All controls will be maintained in good working order. Necessary repairs will be initiated within 24 hours of the site inspection

Silt fence will be inspected for depth of sediment and for tears in order to ensure the fabric is securely attached to the posts and that the posts are well anchored. Sediment buildup will be removed from the silt fence when it reaches  $\frac{1}{3}$  of the height of

Sediment basins and traps will be checked. Sediment will be removed when depth reaches approximately 50 percent of the structure's capacity, and at the conclusion of the construction. Check dams will be inspected for stability. Sediment will be removed when depth reaches 1/2 the height of the dam.

All seeded areas will be checked for bare spots, washouts, and vigorous growth free of significant weed infestations.

Inspection and maintenance reports will be prepared on form DOT 298 for each site inspection, this form will also be used to document changes to the SWPPP. A copy of the completed inspection form will be filed with the SWPPP documents. The SDDOT Project Engineer and contractor's site

superintendent are responsible for inspections. Maintenance, repair activities are the responsibility of the contractor. The SDDOT Project Engineer will complete the inspection and maintenance reports and distribute copies per the distribution instructions on DOT 298.

Discharges from water line flushing.

Pavement wash-water, where no spills or leaks of toxic or hazardous materials have occurred.

Uncontaminated ground water associated with dewatering

### Materials Inventory (4.2. 2.c.(2))

Bituminous Materials Petroleum Based Products Cleaning Solvents

Chemical Fertilizers

### Spill Prevention (4.2 2.c.(2))

### > Material Management

- Housekeeping
  - Only needed products will be stored on-site by the contractor.
  - Except for bulk materials the contractor will store all materials under cover and in appropriate containers.
  - Products must be stored in original containers and labeled.
  - Material mixing will be conducted in accordance with the • manufacturer's recommendations.
  - When possible, all products will be completely used before • properly disposing of the container off site.
  - The manufacturer's directions for disposal of materials and containers will be followed.
  - The contractor's site superintendent will inspect materials storage areas regularly to ensure proper use and disposal.
  - Dust generated will be controlled in an environmentally safe • manner.
  - Vegetation areas not essential to the construction project will be preserved and maintained as noted on the plans.
- Hazardous Materials
  - Products will be kept in original containers unless the container is not resealable.
  - Original labels and material safety data sheets will be retained in a safe place to relay important product information.
  - If surplus product must be disposed of, manufacturer's label directions for disposal will be followed.
  - Maintenance and repair of all equipment and vehicles involving oil changes, hydraulic system drain down, degreasing operations, fuel tank drain down and removal, and other activities which may result in the accidental release of contaminants will be conducted on an impervious surface and under cover during wet weather to prevent the release of contaminants onto the ground.
  - Wheel wash water will be collected and allowed to settle out suspended solids prior to discharge. Wheel wash water will not be discharged directly into any storm water system or storm water treatment system.
  - Potential pH-modifying materials such as: bulk cement, cement kiln dust, fly ash, new concrete washings, concrete pumping, residuals from concrete saw cutting (either wet or dry), and mixer washout waters will be collected on site and managed to prevent contamination of storm water runoff.

### Product Specific Practices (6.8)

### Petroleum Products

All on-site vehicles will be monitored for leaks and receive regular preventive maintenance to reduce the chance of leakage. Petroleum products will be stored in tightly sealed containers which are clearly labeled.

Fertilizers

Fertilizers will be applied only in the amounts specified by the SDDOT. Once applied, fertilizers will be worked into the soil to limit the exposure to storm water. Fertilizers will be stored in an enclosed area. The contents of partially used fertilizer bags will be transferred to sealable containers to avoid spills.

Paints

All containers will be tightly sealed and stored when not required for use. The excess will be disposed of according to the manufacturer's instructions and any applicable state and local regulations.

### Concrete Trucks

Contractors will provide designated truck washout areas on the site. These areas must be self contained and not connected to any storm water outlet of the site. Upon completion of construction washout areas will be properly stabilized.

### > Spill Control Practices (4.2 2 c.(2))

In addition to the previous housekeeping and management practices. the following practices will be followed for spill prevention and cleanup if needed.

- For all hazardous materials stored on site, the manufacturer's recommended methods for spill clean up will be clearly posted. Site personnel will be made aware of the procedures and the locations of the information and cleanup supplies.
- Appropriate cleanup materials and equipment will be maintained by the contractor in the materials storage area on-site. As appropriate, equipment and materials may include items such as brooms, dust pans, mops, rags, gloves, goggles, kitty litter, sand, sawdust, and plastic and metal trash containers specifically for clean up purposes.
- All spills will be cleaned immediately after discovery and the materials disposed of properly.
- The spill area will be kept well ventilated and personnel will wear appropriate protective clothing to prevent injury from contact with a hazardous substance.
- After a spill a report will be prepared describing the spill, what caused it, and the cleanup measures taken. The spill prevention plan will be adjusted to include measures to prevent this type of spill from reoccurring, as well as clean up instructions in the event of reoccurrences.
- The contractor's site superintendent, responsible for day-to-day operations, will be the spill prevention and cleanup coordinator. The contractor is responsible for ensuring that the site superintendent has had appropriate training for hazardous materials handling, spill management, and cleanup.

### > Spill Response (4.2 2 c.(2))

The primary objective in responding to a spill is to quickly contain the material(s) and prevent or minimize migration into storm water runoff and conveyance systems. If the release has impacted on-site storm water, it is critical to contain the released materials on-site and prevent their release into receiving waters. If a spill of pollutants threatens storm water or surface water at the site, the spill response procedures outlined below must be implemented in a timely manner to prevent the release of pollutants.

- The contractor's site superintendent will be notified immediately when a spill or the threat of a spill is observed. The superintendent will assess the situation and determine the appropriate response.
- If spills represent an imminent threat of escaping erosion and sediment controls and entering receiving waters, personnel will be directed to respond immediately to contain the release and notify the superintendent after the situation has been stabilized.
- Spill kits containing appropriate materials and equipment for spill response and cleanup will be maintained by the contractor at the site.
- If oil sheen is observed on surface water (e.g. settling ponds, detention ponds, swales), action will be taken immediately to remove the material causing the sheen. The contractor will use appropriate materials to contain and absorb the spill. The source of the oil sheen will also be identified and removed or repaired as necessary to prevent further releases.

- activities.

### Spill Notification

In the event of a spill, the contractor's site superintendent will make the appropriate notification(s), consistent with the following procedures: > A release or spill of a regulated substance (includes petroleum and petroleum products) must be reported to DENR immediately if any one of the following conditions exists:

- - safety.

gallons). To report a release or spill, call DENR at 605-773-3296 during regular office hours (8 a.m. to 5 p.m. Central time). To report the release after hours, on weekends or holidays, call State Radio Communications at 605-773-3231. Reporting the release to DENR does not meet any obligation for reporting to other state, local, or federal agencies. Therefore, the responsible person must also contact local authorities to determine the local reporting requirements for releases. DENR recommends that spills also be reported to the National Response Center at (800) 424-8802.

### Construction Changes (4.4)

When changes are made to the construction project that will require alterations in the temporary erosion controls of the site, the Storm Water Pollution Prevention Plan (SWPPP) will be amended to provide appropriate protection to disturbed areas, all storm water structures, and adjacent waters. The SDDOT Project Engineer will modify the SWPPP plan (DOT 298) and drawings to reflect the needed changes. Copies of changes will be routed per DOT 298. Copies of forms and the SWPPP will be retained in a designated place for review over the course of the project.

STATE OF	PROJECT	SHEET	TOTAL SHEETS
SOUTH DAKOTA	NH 0012(160)298	D5	D10

If a spill occurs the superintendent or the superintendent's designee will be responsible for completing the spill reporting form and for reporting the spill to SD DENR.

Personnel with primary responsibility for spill response and clean up will receive training by the contractor's site superintendent or designee. The training must include identifying the location of the spill kits and other spill response equipment and the use of spill response materials.

Spill response equipment will be inspected and maintained as necessary to replace any materials used in spill response

The discharge threatens or is in a position to threaten the waters of the state (surface water or ground water).

The discharge causes an immediate danger to human health or

The discharge exceeds 25 gallons.

The discharge causes a sheen on surface water.

The discharge of any substance that exceeds the ground water quality standards of ARSD (Administrative Rules of South Dakota) chapter 74:51:01.

The discharge of any substance that exceeds the surface water quality standards of ARSD chapter 74:51:01.

The discharge of any substance that harms or threatens to harm wildlife or aquatic life.

The discharge of crude oil in field activities under SDCL (South Dakota Codified Laws) chapter 45-9 is greater than 1 barrel (42

### ♦ CERTIFICATIONS

### Certification of Compliance with Federal, State, and Local Regulations

The Storm Water Pollution Prevention Plan (SWPPP) for this project reflects the requirements of all local municipal jurisdictions for storm water management and sediment and erosion control as established by ordinance, as well as other state and federal requirements for sediment and erosion control plans, permits, notices or documentation as appropriate.

### **SPECIFICATIONS**

- 1. Design Specifications: AASHTO Standard Specifications for Highway Bridges 17th Edition using Working Stress Design.
- 2. Construction Specifications: South Dakota Standard Specifications for Roads and Bridges, 2004 Edition and Required Provisions, Supplemental Specifications and/or Special Provisions as included in the Proposal.

### DETAILS AND DIMENSIONS OF EXISTING BRIDGE

All details and dimensions of the existing bridge, contained in these plans, are based on the original construction plans and shop plans and are provided as information only. It is the Contractor's responsibility to inspect and verify the actual field conditions and any necessary as-built dimensions affecting the satisfactory completion of the work required for this project.

### **SCOPE OF BRIDGE WORK & SEQUENCE OF OPERATIONS**

All work on this structure shall be accomplished with the traffic control shown in the plans. Alternate sequence of operations may be submitted by the Contractor for approval by the Engineer at the pre-construction meeting.

- 1. Remove the existing strip seal expansion device in the approach slab and a portion of the existing sleeper slabs for the first phase of construction.
- 2. Modify the existing approach slab and install the new membrane seals in the approach slab.
- 3. Perform Bridge Deck Grinding for the first phase of construction.
- 4. Repair the bridge deck by removing all loose and delaminated concrete from the bridge deck surface.
- 5. Clean the bridge deck surface with abrasive blasting for the first phase of construction.

### SCOPE OF BRIDGE WORK & SEQUENCE OF OPERATIONS (CONT.)

- 6. Place the Two Coat Epoxy Bridge Deck Chip Seal for the first phase of construction.
- 7. Switch traffic and repeat steps 1 through 6 for Phase 2 construction.
- 8. Extend the deck drains at the locations specified in the plans.

### **GENERAL CONSTRUCTION - BRIDGE**

- 1. All mild reinforcing steel shall conform to ASTM A615, Grade 60.
- 2. All exposed concrete corners and edges shall be chamfered 3/4" unless noted otherwise. Match existing chamfer if the existing chamfer differs.
- 3. Use 2" clear cover on all reinforcing steel except as shown.
- 4. Request for construction joints or resteel splices at points other than those shown, must be submitted to the Engineer for prior approval. If additional splices are approved, no payment will be allowed for the added quantity of reinforcing steel.
- 5. Surfaces of fresh concrete at construction joints shall be rough floated sufficiently to consolidate the surface. All construction joints shall be cleaned of surface laitance, curing compounds and other foreign materials prior to placing fresh concrete against the joint.

### **DESIGN MIX OF CONCRETE**

- 1. Class A45 Concrete shall be used for the bid item Class A45 Concrete, Bridge Repair,
- 2. The Type of cement, concrete strength requirements, aggregate requirements, slump and air requirements for the contract item Class A45 Concrete Bridge Repair shall conform to the requirements of Section 460 of the Construction Specification.

### CONCRETE BREAKOUT

- 1. The existing approach slab and sleeper slab shall be broken out to the limits shown on the plans. Breakout limits shall be defined with a 3/4" deep sawcut (unless specified otherwise in these plans), where practical, as approved by the Engineer. Reinforcing steel that is exposed and is scheduled for use in the new construction shall be cleaned and straightened to the satisfaction of the Engineer. Care shall be taken not to damage the existing reinforcing steel that is to be reused in the new construction during concrete breakout. Any reinforcing steel that is damaged during concrete breakout shall be replaced or repaired, as approved by the Engineer, by the Contractor at no cost to the Department.
- 2. All broken out concrete, discarded reinforcing bars and expansion devices shall be disposed of by the Contractor. Any disposal of discarded material shall be in accordance with the Construction Specifications.

### **CONCRETE BREAKOUT (CONTINUED)**

### **APPROACH SLAB MODIFICATION**

STATE OF	PROJECT	SHEET NO.	TOTAL SHEETS
S.D.	NH 0012(160)298	E4	E30

3. During concrete removal operations, no broken out concrete shall be allowed to fall into the James River.

4. The contract unit price per cubic yard for "Breakout Structural Concrete" shall include breaking out concrete, cleaning, straightening existing reinforcing steel, removal of the existing strip seal extrusion, and disposal of all broken out material.

5. The existing reinforcing steel in the approach slab and sleeper slab is epoxy coated. Reinforcing steel that is exposed and is scheduled for use in the new construction shall be cleaned of all adhering concrete and rust (if present) with a wire brush and straightened to the satisfaction of the Engineer. After all concrete removal and rebar straightening, the Contractor shall visually inspect the epoxy coating on the salvaged reinforcing steel with the Engineer and repair all areas of damaged epoxy coating as approved by the Engineer. The damaged coating areas shall be repaired with a touch up coating material supplied by an epoxy coating manufacturer who supplies coating material for new epoxy coated reinforcing steel. This coating shall be inert in concrete and compatible with the existing coating on the reinforcing steel. The coating shall be allowed to cure for 24 hours or as per the manufacturer's recommendations, whichever is more stringent, before concrete can be placed. These bars shall be clean and free from all surface contaminants before coating. The cost of cleaning and placing the epoxy touch up coating to the existing reinforcing steel shall be incidental to the various bid items.

1. The portion of the new sleeper slab riser and approach slab shall be built up to the level of the roadway surface and a new Membrane Sealant Joint placed in the location where the strip seal is now.

2. The membrane sealant shall be furnished and installed in accordance with the Membrane Sealant Expansion Joint notes.

3. The portions of the existing sleeper slab riser and approach slab shall be broken out in accordance with the Concrete Breakout notes.

### MEMBRANE SEALANT EXPANSION JOINT

- 1. Install all membrane sealant expansion joints at the plan shown locations in conformance to the following notes.
- 2. The Membrane Sealant is a foam sealant consisting of an open-cell high density polyurethane foam impregnated with either a polymer modified bitumen or a neoprene rubber suspended in chlorinated hydrocarbons. The Membrane Sealant shall be supplied by one the following companies:

Wabo HSeal Watson Bowman Acme Corp. 95 Pineview Drive, Amherst NY 14228 Phone: 716-691-7566 Fax: 716-691-9239 Web site: http://www.wbacorp.com

Sealtite 50N Schul International Company, LLC One Industrial Drive Pelham, NH 03076 Phone: 800-848-1120 Fax: 800-998-9105 Web site: http://www.sealtiteusa.com

Polytite N Sunshine Industrial 5051 Merrian Drive Merriam, KS 66203 Phone: 913-362-6300

- 3. The manufacturer shall supply the membrane sealant in packaging that precompresses the membrane sealant. The precompressed dimension shall be as recommended by the sealant manufacturer to provide a water tight seal throughout a joint movement range of + 25% (minimum) from the specified joint opening dimension. In no case shall the precompressed dimension exceed 75% of the joint opening width. The foam sealant shall be slowly self expanding to permit workers ample time to install the membrane sealant before the membrane sealant exceeds the joint opening width.
- 4. The membrane sealant shall be supplied in pieces 5 feet in length or longer. Miter the ends of each piece for ease of joining to the adjacent pieces. The membrane sealant shall have a minimum depth of 4 inches. The foam sealant shall be ultra-violet and ozone resistant.
- 5. The bonding adhesive used to attach the membrane sealant to the adjacent concrete shall be a waterproof epoxy adhesive that adheres to concrete surfaces and is approved by the membrane sealant supplier.
- 6. Adhesive used to join adjacent pieces of the membrane sealant shall be as recommended by the manufacturer.
- 7. The Styrofoam filler material shall be closed cell and water-tight as approved by the Engineer.
- 8. The minimum ambient air temperature at the time of joint installation and adhesive curing shall be 40° F.

### MEMBRANE SEALANT EXPANSION JOINT (CONTINUED)

- 9. A technical representative of the membrane sealant supplier shall be present at the jobsite during installation.
- 10. The joint opening shall be formed during the concrete placement by Styrofoam block out material. The Styrofoam block out material shall remain in-place until the adjacent concrete has cured for a minimum of 7 days. After curing the 7 days the Styrofoam shall be removed to the plan specified depth to allow for placement of the membrane sealant material.
- 11. Concrete surfaces that will be in contact with the membrane sealant shall be thoroughly cleaned by abrasive blasting to remove all laitance and contaminants (such as oil, curing compounds, etc.) from the concrete surface. At a minimum two passes of abrasive blasting with the nozzle held at an angle to within 1 to 2 inches of the a concrete surface will be required. Cleaning of the concrete surfaces with solvents, wire brushing, or grinding shall not be permitted.
- 12. After abrasive blasting, but immediately prior to membrane joint installation, the entire joint contact surface shall be air blasted. The air compressor used for joint cleaning shall be equipped with trap devices capable of providing moisture-free and oil-free air at a recommended pressure of 90 psi. To obtain complete bonding with the adhesive, the adjacent concrete surfaces must be dry and clean. The contact surfaces for the joint shall be visually inspected by the Engineer immediately prior to joint installation to verify the surface is dry and clean.
- 13. Individual spliced sections shall be installed as per the manufacturers' recommendations. The membrane joint sealant supplier shall submit a detailed installation procedure to the Engineer at least 5 days prior to joint installation for his review.
- 14. Traffic shall not be allowed on the joint for a minimum 3 hours unless otherwise directed by the Engineer.
- 15. The Membrane Sealant Expansion Joint will be measured in feet to the nearest one-tenth foot, complete in place. Measurement will be made of the overall horizontal length. The Membrane Sealant Expansion Joint will be paid for at the contract unit price per foot complete in place. Payment for this item shall be full compensation for furnishing all the required materials in place, inclusive of labor, equipment and incidentals necessary to complete the work in accordance with the plans and the foregoing specifications.

### REMOVAL OF LOOSE AND DELAMINATED CONCRETE

- 1. This work consists of preparation of the existing bridge deck for Two Coat Epoxy Bridge Deck Chip Seal by removing and replacing the loose and delaminated concrete.
- 2. Concrete used to repair the deck surface shall be in accordance with the Concrete Patching Material notes in this set of plans.

### **REMOVAL OF LOOSE AND DELAMINATED CONCRETE (CONT.)**

- following two classes:
- steel).
- - steel.
  - concrete.

STATE OF	PROJECT	SHEET NO.	TOTAL SHEETS
S.D.	NH 0012(160)298	E5	E30

3. Concrete Removal on the bridge deck shall be divided into one of the

a. Concrete Removal, Class A: Concrete Removal, Class A shall consist of the removal of delaminated and visibly loose concrete and any bituminous patches (when present) from the top of existing bridge deck down to a depth no deeper than the top of the top mat of bridge deck reinforcing steel.

b. Concrete Removal, Class B: Concrete Removal, Class B areas shall be determined after completion of the Concrete Removal, Class A has been accomplished. Concrete Removal, Class B shall consist of the removal of delaminated and visibly loose concrete that exists below the bottom limits of the Concrete Removal, Class A (below the top of the top mat of reinforcing

4. Concrete Removal shall be by jackhammers and chipping hammers or other methods as approved by the Engineer. Jackhammers and chipping hammers shall be used as follows:

a. Jackhammers heavier than 30 pounds will not be permitted.

b. Chipping hammers heavier than 15 pounds will not be permitted for removing concrete below the top of the top mat of reinforcing

c. Jackhammers and chipping hammers shall not be operated at an angle in excess of 45 degrees measured from the surface of the

d. Extreme care shall be taken when using jackhammers and chipping hammers to assure that existing reinforcing steel is not damaged or debonded from the sound concrete.

5. Removal shall begin near the center of the loose or delaminated concrete and shall progress outwardly until the loose or delaminated concrete is removed and sound concrete is encountered such that the amount of concrete removal is minimized.

6. The edges of the resulting areas of removed concrete shall be nearly vertical or slightly tapered inward from the top down to a minimum depth of one inch. If this condition is not able to be achieved with jackhammers or chipping hammers, saw cutting the edges of the removal area may be required to attain satisfactory results.

### **REMOVAL OF LOOSE AND DELAMINATED CONCRETE (CONT.)**

- 7. Care shall be taken during concrete removal to not nick, gouge, or in any other way damage the in-place reinforcing steel. Any inadvertent damage to the in-place reinforcing steel shall be brought to the attention of the Bridge Construction Engineer and shall be repaired by the Contractor as directed by the Engineer at no additional cost to the Department.
- 8. Concrete Removal. Class A will be measured to the nearest 0.1 foot and the area computed to the nearest 0.1 square yard. Concrete Removal, Class A will be paid for at the contract unit price per square yard. Payment will be full compensation for all labor, equipment, materials, and all incidental work required to remove the specified concrete, concrete sawing, and disposing of removed material.
- 9. Concrete Removal, Class B will be measured to the nearest 0.1 foot and the area computed to the nearest 0.1 square vard. Concrete Removal, Class B will be paid for at the contract unit price per square yard. Payment will be full compensation for all labor, equipment, materials, and all incidental work required to remove the specified concrete, concrete sawing, and disposing of removed material.

### **CONCRETE PATCHING MATERIAL**

- 1. Concrete patching material will be used to fill in the removal areas of the loose and delaminated concrete.
- 2. Concrete patching material shall be packaged, dry, rapid-hardening cementitious mortar or concrete materials conforming to the requirements of ASTM C 928. Type R-3 and shall contain no chlorides or magnesium phosphates.
- 3. Water used for the concrete patching material shall be in conformance with Section 790 of the Construction Specifications.
- 4. Upon completion of the concrete removal and immediately prior to placing any concrete patching material into the concrete removal areas, the removal areas shall be thoroughly cleaned of loose and foreign material by abrasive blasting. The abrasive blasting shall be to the extent that all surface laitance is removed. Abrasive blast cleaning shall expose the coarse aggregate and remove rust from any exposed reinforcing steel. After abrasive blasting, the surface shall be cleaned by the use of compressed air to the satisfaction of the Engineer.
- 5. The existing surface at the time of placement of the concrete patching material shall be at least 40° F, measured by a thermometer placed against the concrete surface and covered with an insulating blanket. The concrete patching material shall be mixed and placed in accordance with the manufacturer's technical data sheet. The Contractor shall provide a manufacturer's technical data sheet to the Engineer prior to performing the work. The concrete patching material shall be maintained at or above 45° F for at least 72 hours after placement.

### CONCRETE PATCHING MATERIAL (CONTINUED)

- 6. Immediately after finishing the concrete patching material, the surface of the concrete patching material shall be covered with a double layer of wet burlap. Within one hour of covering with wet burlap, polyethylene sheeting shall be placed on the wet burlap. The surface shall be wet cured for a minimum of 48 hours or in accordance with the manufacturer's recommendations, whichever is more stringent. Following the wet cure, the burlap and polyethylene sheeting shall be removed and the surface allowed to air dry for a minimum of 48 hours after removal of the burlap and polyethylene sheeting before application of the epoxy chip seal is permitted.
- 7. Concrete Patching Material will be measured to nearest 0.1 cubic feet as determined from the theoretical yield per bag of Concrete Patching Material. Concrete Patching Material will be paid for at the contract unit price per cubic foot. Payment will be full compensation for all labor, equipment, materials, and all incidental work required to abrasive blast clean the removal areas, and furnish, place and cure the concrete patching material within the removal areas.

### **EPOXY CHIP SEAL**

The Epoxy Chip Seal shall be applied in accordance with the Special Provision for "Two Coat Epoxy Bridge Deck Chip Seal".

### **DECK DRAIN EXTENSIONS**

- 1. All angles shall conform to ASTM A709, Grade 36 and shall be galvanized in accordance with ASTM A123.
- 2. The 3/8" diameter x 2 3/4" long wedge-type anchors shall be commercially available steel wedge-type anchor bolts, nuts and washers set in concrete in accordance with the recommendations of the manufacturer. The Contractor shall obtain from the manufacturer and submit to the Engineer, certification indicating the material is either stainless steel or the finish is galvanized.
- 3. The 3/8" diameter bolts, nuts and washers shall conform to ASTM A307 and shall be galvanized in accordance with ASTM A153.
- 4. The 6" diameter pipes shall be Schedule 40 Acrylonitrile Butadine-Styrene (ABS) Plastic Pipe conforming to the requirements of ASTM - D2661 or Schedule 40 ABS Plastic Pipe conforming to the requirements of ASTM – F628.
- 5. The Sheet Metal strap shall be fabricated from hot-rolled carbon steel conforming to ASTM A570. The material shall have a 16 gage minimum coating designation G90, regular spangle.
- 6. The method used to attach the ABS pipe to the 16 gauge galvanized sheet metal straps shall be at the option of the Contractor as approved by the Engineer.

### **DECK DRAIN EXTENSIONS (CONTINUED)**

stated in these plans.

STATE OF	PROJECT	SHEET NO.	TOTAL SHEETS
S.D.	NH 0012(160)298	E6	E30

7. The deck drain extensions shall be paid for at the contract unit price per each for "Extend Deck Drain" and shall be for each drain in place requiring extension. The price shall be payment in full for furnishing all specified materials, galvanizing specified material, all labor and any incidentals required to construct the deck drain extensions as

### SPECIFICATIONS

- 1. Design Specifications: AASHTO Standard Specifications for Highway Bridges 17th Edition using Working Stress Design.
- 2. Construction Specifications: South Dakota Standard Specifications for Roads and Bridges, 2004 Edition and Required Provisions, Supplemental Specifications and/or Special Provisions as included in the Proposal.

### DETAILS AND DIMENSIONS OF EXISTING BRIDGE

All details and dimensions of the existing bridge, contained in these plans, are based on the original construction plans and shop plans and are provided as information only. It is the Contractor's responsibility to inspect and verify the actual field conditions and any necessary as-built dimensions affecting the satisfactory completion of the work required for this project.

### **SCOPE OF BRIDGE WORK & SEQUENCE OF OPERATIONS**

All work on this structure shall be accomplished with the traffic control shown in the plans.

- 1. Perform Bridge Deck Grinding for the first phase of construction.
- 2. Repair the bridge deck by removing all loose and delaminated concrete from the bridge deck surface.
- 3. Clean the bridge deck surface with abrasive blasting for the first phase of construction.
- 4. Remove the existing asphalt concrete pavement adjacent to both bridge ends to the limits shown elsewhere in the plans for Phase 1.

### SCOPE OF BRIDGE WORK & SEQUENCE OF OPERATIONS (CONT.)

- 5. Excavate the existing granular material behind the abutment backwalls to the limits shown in the plans for Phase 1 of construction.
- 6. Install new Approach Slab Underdrain to the limits shown by the plans for Phase 1 of construction.
- 7. Install the Sleeper slabs and Approach slabs for the first phase of construction.
- 8. Place the Two Coat Epoxy Bridge Deck Chip Seal for the first phase of construction.
- 9. Switch traffic and repeat steps 1 through 8 for the second phase of construction.

### **GENERAL CONSTRUCTION NOTES**

- 1. All new reinforcing steel shall conform to ASTM-A615, Grade 60.
- 2. Request for construction joints or resteel splices at points other than those shown, must be submitted to the Engineer for prior approval. If additional splices are approved, no payment will be allowed for the added quantity of reinforcing steel.
- 3. Use 2 inch clear cover on all reinforcing steel except as shown otherwise.
- 4. All exposed concrete corners and edges shall be chamfered 3/4" unless noted otherwise in the plans. Match existing chamfer if the existing chamfer differs.

### **DESIGN MIX OF CONCRETE**

- 1. Class A45 Concrete shall be used for the bid items Concrete Approach Slab for Bridge and Concrete Approach Sleeper Slab for Bridge.
- 2. The type of cement, concrete strength requirements, aggregate requirements, slump and air requirements for the bid items Concrete Approach Slab for Bridge and Concrete Approach Sleeper Slab for Bridge and shall conform to the requirements of Section 460 of the Construction Specification.

### **REMOVAL OF LOOSE AND DELAMINATED CONCRETE**

- following two classes:

  - steel).
- steel.
- concrete.

STATE OF	PROJECT	SHEET NO.	TOTAL SHEETS
S.D.	NH 0012(160)298	E17	E30

1. This work consists of preparation of the existing bridge deck for Two Coat Epoxy Bridge Deck Chip Seal by removing and replacing the loose and delaminated concrete.

2. Concrete used to repair the deck surface shall be in accordance with the Concrete Patching Material notes in this set of plans.

3. Concrete Removal on the bridge deck shall be divided into one of the

a. Concrete Removal, Class A: Concrete Removal, Class A shall consist of the removal of delaminated and visibly loose concrete and any bituminous patches (when present) from the top of existing bridge deck down to a depth no deeper than the top of the top mat of bridge deck reinforcing steel.

b. Concrete Removal, Class B: Concrete Removal, Class B areas shall be determined after completion of the Concrete Removal. Class A has been accomplished. Concrete Removal, Class B shall consist of the removal of delaminated and visibly loose concrete that exists below the bottom limits of the Concrete Removal, Class A (below the top of the top mat of reinforcing

4. Concrete Removal shall be by jackhammers and chipping hammers or other methods as approved by the Engineer. Jackhammers and chipping hammers shall be used as follows:

a. Jackhammers heavier than 30 pounds will not be permitted.

b. Chipping hammers heavier than 15 pounds will not be permitted for removing concrete below the top of the top mat of reinforcing

c. Jackhammers and chipping hammers shall not be operated at an angle in excess of 45 degrees measured from the surface of the

d. Extreme care shall be taken when using jackhammers and chipping hammers to assure that existing reinforcing steel is not damaged or debonded from the sound concrete.

5. Removal shall begin near the center of the loose or delaminated concrete and shall progress outwardly until the loose or delaminated concrete is removed and sound concrete is encountered such that the amount of concrete removal is minimized.

2)OF (15

### **REMOVAL OF LOOSE AND DELAMINATED CONCRETE (CONT.)**

- 6. The edges of the resulting areas of removed concrete shall be nearly vertical or slightly tapered inward from the top down to a minimum depth of one inch. If this condition is not able to be achieved with jackhammers or chipping hammers, saw cutting the edges of the removal area may be required to attain satisfactory results.
- 7. Care shall be taken during concrete removal to not nick, gouge, or in any other way damage the in-place reinforcing steel. Any inadvertent damage to the in-place reinforcing steel shall be brought to the attention of the Bridge Construction Engineer and shall be repaired by the Contractor as directed by the Engineer at no additional cost to the Department.
- 8. Concrete Removal, Class A will be measured to the nearest 0.1 foot and the area computed to the nearest 0.1 square yard. Concrete Removal, Class A will be paid for at the contract unit price per square vard. Payment will be full compensation for all labor, equipment, materials, and all incidental work required to remove the specified concrete, concrete sawing, and disposing of removed material.
- 9. Concrete Removal, Class B will be measured to the nearest 0.1 foot and the area computed to the nearest 0.1 square vard. Concrete Removal, Class B will be paid for at the contract unit price per square yard. Payment will be full compensation for all labor, equipment, materials, and all incidental work required to remove the specified concrete, concrete sawing, and disposing of removed material.

### **CONCRETE PATCHING MATERIAL**

- 1. Concrete patching material will be used to fill in the removal areas of the loose and delaminated concrete.
- 2. Concrete patching material shall be packaged, dry, rapid-hardening cementitious mortar or concrete materials conforming to the requirements of ASTM C 928, Type R-3 and shall contain no chlorides or magnesium phosphates.
- 3. Water used for the concrete patching material shall be in conformance with Section 790 of the Construction Specifications.
- 4. Upon completion of the concrete removal and immediately prior to placing any concrete patching material into the concrete removal areas, the removal areas shall be thoroughly cleaned of loose and foreign material by abrasive blasting. The abrasive blasting shall be to the extent that all surface laitance is removed. Abrasive blast cleaning shall expose the coarse aggregate and remove rust from any exposed reinforcing steel. After abrasive blasting, the surface shall be cleaned by the use of compressed air to the satisfaction of the Engineer.
- 5. The existing surface at the time of placement of the concrete patching material shall be at least 40° F, measured by a thermometer placed against the concrete surface and covered with an insulating blanket. The concrete patching material shall be mixed and placed in accordance with the manufacturer's technical data sheet. The Contractor shall provide a manufacturer's technical data sheet to the Engineer prior to performing the work. The concrete patching material shall be maintained at or above 45° F for at least 72 hours after placement.

### CONCRETE PATCHING MATERIAL (CONTINUED)

- 6. Immediately after finishing the concrete patching material, the surface of the concrete patching material shall be covered with a double layer of wet burlap. Within one hour of covering with wet burlap, polyethylene sheeting shall be placed on the wet burlap. The surface shall be wet cured for a minimum of 48 hours or in accordance with the manufacturer's recommendations, whichever is more stringent. Following the wet cure, the burlap and polyethylene sheeting shall be removed and the surface allowed to air dry for a minimum of 48 hours after removal of the burlap and polyethylene sheeting before application of the epoxy chip seal is permitted.
- 7. Concrete Patching Material will be measured to nearest 0.1 cubic feet as determined from the theoretical yield per bag of Concrete Patching Material. Concrete Patching Material will be paid for at the contract unit price per cubic foot. Payment will be full compensation for all labor, equipment, materials, and all incidental work required to abrasive blast clean the removal areas, and furnish, place and cure the concrete patching material within the removal areas.

### **EPOXY CHIP SEAL**

The Epoxy Chip Seal shall be applied in accordance with the Special Provision for "Two Coat Epoxy Bridge Deck Chip Seal".

### **INSTALLING DOWELS IN CONCRETE**

- 1. Holes drilled in the existing concrete shall be true and normal or as shown in the plans. Drilling holes using a core drill shall not be allowed. Care shall be taken not to damage the existing reinforcing steel. It is likely that some of the existing reinforcing steel shown in the original construction plans may have been placed out of position during original construction. Therefore, prior to the start of drilling any holes in the concrete, an effort will be made by Department forces to mark on the concrete surface where practical any locations of the in-place reinforcing steel. In spite of this precaution, the Contractor can still expect to encounter and have to drill through reinforcing steel or shift the dowel spacing as approved by the Engineer to miss the existing reinforcing steel. If the Contractor shifts the dowel spacing, the unused drill holes shall be completely filled with the epoxy resin specified in note number 2 under "Installing Dowels in Concrete" as approved by the Engineer.
- 2. The epoxy resin mixture shall be of a type for bonding steel to hardened concrete and shall conform to AASHTO M235 Type IV, Grade 3 (Equivalent to ASTM C881, Type IV, Grade 3). Grade 3 epoxy shall be used for all horizontal dowels.
- 3. The diameter of the drilled holes shall not be less than 1/8 inch greater, nor more than 3/8 inch greater than the diameter of the dowels or as per the Manufacturer's recommendations. The drilled holes shall be blown out with compressed air using a device that will reach the back of the hole to ensure that all debris or loose material has been removed prior to epoxy injection.

### **INSTALLING DOWELS IN CONCRETE (CONTINUED)**

- not be allowed.
- resin manufacturer.
- 60.
- Dowel in Concrete".

### APPROACH SLAB UNDERDRAIN SYSTEM

System and the following notes.

STATE OF	PROJECT	SHEET NO.	TOTAL SHEETS
S.D.	NH 0012(160)298	E18	E30

4. Mix epoxy resin as recommended by the Manufacturer and apply by an injection method as approved by the Engineer. Beginning at the back of the drilled holes, fill the holes 1/3 to 1/2 full of epoxy, or as recommended by the Manufacturer, prior to insertion of the steel bar. Care shall be taken to prevent epoxy from running out of the horizontal holes prior to steel bar insertion. Rotate the steel bar during installation to eliminate voids and ensure complete bonding of the bar. Insertion of the bars by the dipping or painting method will

5. No loads shall be applied to the epoxy grouted dowel bars until the epoxy resin has had sufficient time to cure as specified by the epoxy

6. Dowel bars shall be deformed bars conforming to ASTM A615 Grade

7. The cost of epoxy resin, dowels, installation and other incidental items shall be incidental to the contract unit price per each for "Install

The Approach Slab Underdrain system shall be constructed in accordance with the Special Provision for Approach Slab Underdrain

1. The existing approach pavement within the removal limits of the new approach slab underdrain system is estimated between two feet and three feet thick. If actual asphalt depths differ, the Bridge Construction Engineer shall determine recommended repairs.

2. The depression in the existing ground surface below the approach pavement shall be leveled using a soil leveling course.

3. The soil used as a leveling course shall be furnished by the contractor. The soil shall have a maximum Liquid Limit (LL) of 45 and a Plastic Index (PI) greater than 10 but less than 25. The contractor shall be responsible for one LL and PI test for each borrow source and each soil type within each borrow source.

### **APPROACH SLABS**

- 1. The use of an approved finishing machine will be required during placement of Class A45 Concrete for the approach slabs. Concrete placement in front of the machine shall be kept parallel to the screed.
- 2. The concrete in the approach slab shall be tined perpendicular to the centerline of roadway.
- 3. The Concrete Approach Sabs Adjacent to Bridge shall be cured in accordance with Section 460.3.N. of the Construction Specifications.
- 4. The new approach slabs and sleeper slabs shall have a surface finish as stipulated in Section 460.3.M.4 of the Construction Specifications. **APPROACH SLABS (CONTINUED)**
- 5. The top of approach slab elevations shall be established during construction and shall be subject to the approval of the Engineer. Care shall be taken to provide a smooth transition from the bridge deck elevations to the new pavement elevations established in the field so as to prevent any dips or bumps in the areas of the bridge ends or ends of the new approach slabs.
- 6. Sleeper slab riser shall be cast with the Approach Slab. Care shall be taken to ensure the correct grade is maintained across the joint.
- 7. Concrete Approach Sleeper Slab for Bridge will be paid for at the contract unit price per square yard. This payment shall be full compensation for all excavation, furnishing, hauling, and placing all materials including concrete, concrete anchors, and reinforcing steel; for disposal of all excavated material and surplus materials; and for labor, tools, equipment and any incidentals necessary to complete this item of work.
- 8. Concrete Approach Slab for Bridge will be paid for at the contract unit price per square yard. This payment shall be full compensation for all excavation, placing and/or shaping of the underlying gravel material, furnishing, hauling and placing all materials, including concrete, asphalt paint or 6 mil polyethylene sheeting, elastic joint sealer and reinforcing steel; for disposal of all excavated material and surplus materials and for labor, tools, equipment and any incidentals necessary to complete this item of work.

### **MEMBRANE SEALANT EXPANSION JOINT**

- 1. Install all membrane sealant expansion joints at the plan shown locations in conformance to the following notes.
- 2. The Membrane Sealant is a foam sealant consisting of an open-cell high density polyurethane foam impregnated with either a polymer modified bitumen or a neoprene rubber suspended in chlorinated hydrocarbons. The Membrane Sealant shall be supplied by one the following companies:

Wabo HSeal Watson Bowman Acme Corp. 95 Pineview Drive, Amherst NY 14228 Phone: 716-691-7566 Fax: 716-691-9239 Web site: http://www.wbacorp.com

### MEMBRANE SEALANT EXPANSION JOINT (CONTINUED)

Sealtite 50N Schul International Company, LLC One Industrial Drive Pelham, NH 03076 Phone: 800-848-1120 Fax: 800-998-9105 Web site: http://www.sealtiteusa.com

Polytite N Sunshine Industrial 5051 Merrian Drive Merriam, KS 66203 Phone:913-362-6300

- 3. The manufacturer shall supply the membrane sealant in packaging that precompresses the membrane sealant. The precompressed dimension shall be as recommended by the sealant manufacturer to provide a water tight seal throughout a joint movement range of + 25% (minimum) from the specified joint opening dimension. In no case shall the precompressed dimension exceed 75% of the joint opening width. The foam sealant shall be slowly self expanding to permit workers ample time to install the membrane sealant before the membrane sealant exceeds the joint opening width.
- 4. The membrane sealant shall be supplied in pieces 5 feet in length or longer. Miter the ends of each piece for ease of joining to the adjacent pieces. The membrane sealant shall have a minimum depth of 4 inches. The foam sealant shall be ultra-violet and ozone resistant.
- 5. The bonding adhesive used to attach the membrane sealant to the adjacent concrete shall be a waterproof epoxy adhesive that adheres to concrete surfaces and is approved by the membrane sealant supplier.
- 6. Adhesive used to join adjacent pieces of the membrane sealant shall be as recommended by the manufacturer.
- 7. The Styrofoam filler material shall be closed cell and water-tight as approved by the Engineer.
- 8. The minimum ambient air temperature at the time of joint installation and adhesive curing shall be 40° F.
- 9. A technical representative of the membrane sealant supplier shall be present at the jobsite during installation.
- 10. The joint opening shall be formed during the concrete placement by Styrofoam block out material. The Styrofoam block out material shall remain in-place until the adjacent concrete has cured for a minimum of 7 days. After curing the 7 days the Styrofoam shall be removed to the plan specified depth to allow for placement of the membrane sealant material.

### MEMBRANE SEALANT EXPANSION JOINT (CONTINUED)

- drv and clean.

STATE OF	PROJECT	SHEET NO.	TOTAL SHEETS
S.D.	NH 0012(160)298	E19	E30

11. Concrete surfaces that will be in contact with the membrane sealant shall be thoroughly cleaned by abrasive blasting to remove all laitance and contaminants (such as oil, curing compounds, etc.) from the concrete surface. At a minimum two passes of abrasive blasting with the nozzle held at an angle to within 1 to 2 inches of the a concrete surface will be required. Cleaning of the concrete surfaces with solvents, wire brushing, or grinding shall not be permitted.

12. After abrasive blasting, but immediately prior to membrane joint installation, the entire joint contact surface shall be air blasted. The air compressor used for joint cleaning shall be equipped with trap devices capable of providing moisture-free and oil-free air at a recommended pressure of 90 psi. To obtain complete bonding with the adhesive, the adjacent concrete surfaces must be dry and clean. The contact surfaces for the joint shall be visually inspected by the Engineer immediately prior to joint installation to verify the surface is

13. Individual spliced sections shall be installed as per the manufacturers' recommendations. The membrane joint sealant supplier shall submit a detailed installation procedure to the Engineer at least 5 days prior to joint installation for his review.

14. Traffic shall not be allowed on the joint for a minimum 3 hours unless otherwise directed by the Engineer.

15. The Membrane Sealant Expansion Joint will be measured in feet to the nearest one-tenth foot, complete in place. Measurement will be made of the overall horizontal length. The Membrane Sealant Expansion Joint will be paid for at the contract unit price per foot complete in place. Payment for this item shall be full compensation for furnishing all the required materials in place, inclusive of labor, equipment and incidentals necessary to complete the work in accordance with the plans and the foregoing specifications.

- **GENERAL NOTES:**
- △ The depth of the trench shall be 2' 0" unless the roadway ditch topography will not allow it. The trench depth shall never be less than 1' 0".
- The centerline of the trench may be adjusted by one foot toward or away from the bridge, as approved by the Engineer, to miss the location of the guardrail posts.
- For locations where the approach slab is on a zero grade to one percent grade provide this minimum slope. For all other grades finish this surface to match the finished grade of the approach slab.

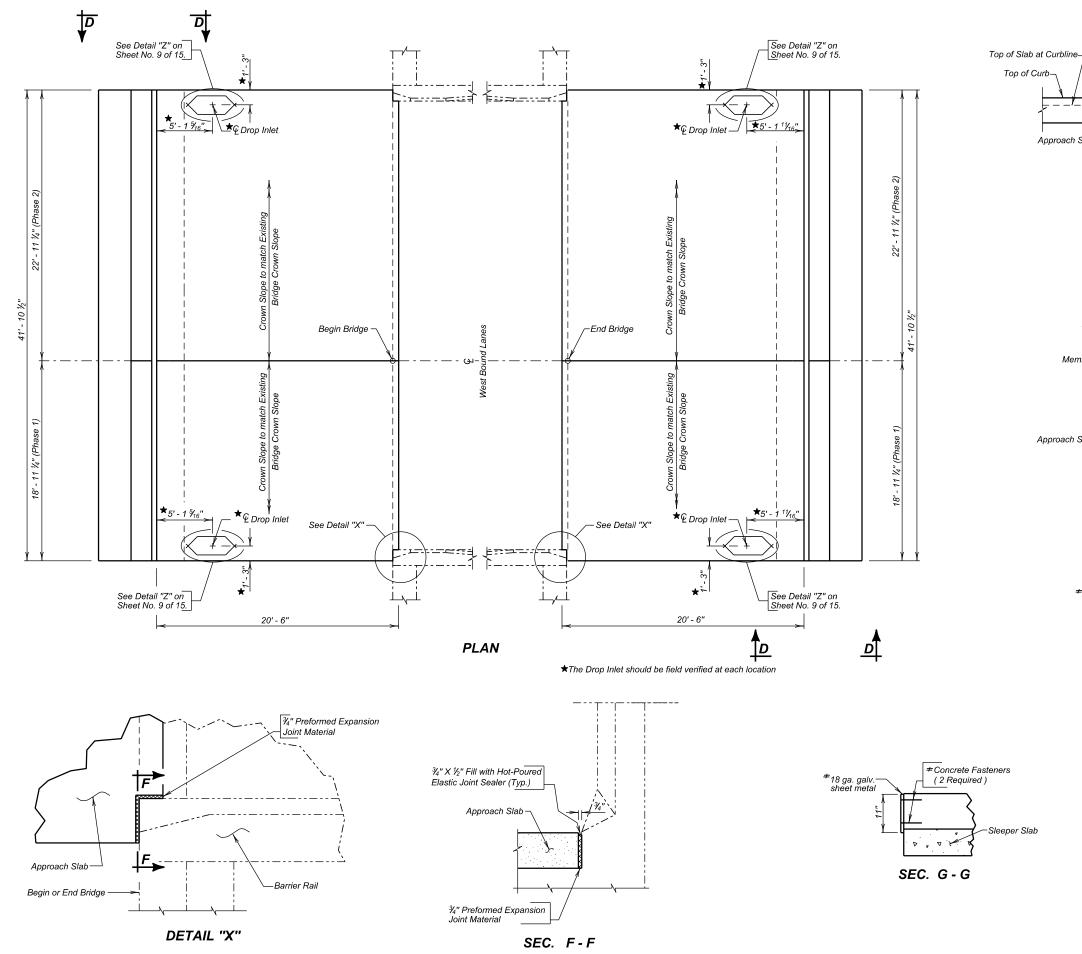

- ★ For informational purposes only, 10 feet of 4" Dia. Std. Black Steel Pipe is needed for Phase 2, which is contained in the above bid items.
- \* For estimating purposes only, a factor of 1.89 tons/cu. yd. was used to convert Cu. Yds. to Tons.
- Includes 325 Sq. Yd. of 6 mil. Polyethylene Sheeting (not including laps) and 255 Sq. Yd. of Type B Drainage Fabric.

UTILITIES

The Contractor shall contact the involved utility companies through South Dakota One Call (1-800-781-7474) prior to starting work. It shall be the responsibility of the Contractor to coordinate work with the utility owners to avoid damage to existing facilities.

Utilities are not planned to be affected on this project. If utilities are identified near the improvement area through the SD One Call Process as required by South Dakota Codified Law 49-7A and Administrative Rule Article 20:25, the Contractor shall contact the Project Engineer to determine modifications that will be necessary to avoid utility impacts.

### SURFACING THICKNESS DIMENSIONS

Plans tonnage will be applied even though the thickness may vary from that shown on the plans.

At those locations where material must be placed to achieve a required elevation, plans tonnage may be varied to achieve the required elevation.

### UNCLASSIFIED EXCAVATION

Unclassified Excavation consisting of earth embankment and/or granular base material shall be removed from the locations listed in the Table of Traffic Control Crossover Quantities, the Table of Pipe and Related Items and the following Table of Unclassified Excavation.

Unclassified excavation shall be used for inslope flattening and widening as directed by the Engineer.

Included in the Estimate of Quantities are 25 cubic yards of Unclassified Excavation-Digouts per mile for the shoulders.

Payment will be based on plans quantity. Further measurements will not be made unless there is a change made to the limits of work.

# TABLE OF UNCLASSIFIED EXCAVATION

Begin and End of I	gin and End of Project and Tie Ins to Structures

In order to construct the median crossover surfacing flush with the asphalt concrete on the median shoulders, it will be necessary to mill the existing asphalt concrete the width of the existing median crossovers. This is shown on the median crossover detail sheet. Payment is based on plans quantity for "Cold Milling Asphalt Concrete" in the following table.

Location	Cold Milling (SqYd)
Median Crossovers	1,536
Approaches and Intersecting Roads	180
Total:	1,716

# MATERIAL

satisfaction of the Engineer.

Proper drainage shall be maintained so water will not pond on the mainline granular surfacing or embankment. Proper drainage will be to the satisfaction of the Engineer.

quantities.

shall be required.

STATE OF	PROJECT	SHEET NO.	TOTAL SHEETS
SOUTH DAKOTA	NH 0012(160)298	F2	F79

### **COLD MILLING ASPHALT CONCRETE**

### SALVAGE AND STOCKPILE ASPHALT MIX AND GRANULAR BASE

Asphalt Mix and Granular Base Material shall be salvaged from the Westbound lanes of Highway 12 at the beginning and end of the project and at the tie ins at the 2 structures and shall be used as Base Course, Salvaged. The salvaged material shall be stockpiled at a site, which may include the shoulders and inslopes of the westbound lanes, to the

The quantity of salvaged granular material may vary from the plans. The Contractor will be required to use all salvaged material on this project by decreasing or increasing the quantity of Gravel Cushion, Modified or Base Course, Salvaged as necessary, or as directed by the Engineer. Plans quantity will be the basis of measurement and payment for the above mentioned work. No adjustment in the contract unit price per ton for salvaged material will be made because of a variation in salvaged material

If the Contractor experiences any loss of Base Course, Salvaged during the salvage and replacement operations, additional Gravel Cushion, Modified

### SALVAGE AND STOCKPILE ASPHALT MIX AND GRANULAR BASE MATERIAL - CONTINUED

If the existing Base Course, Salvaged, that is to be incorporated into the completed surface, becomes contaminated, it shall be replaced with acceptable Base Course, Salvaged and Gravel Cushion, Modified. Acceptance of Base Course, Salvaged shall be determined by the Engineer. Additional Base Course, Salvaged and Gravel Cushion, Modified required to bring the surfacing to the typical section shall be furnished by the Contractor at no additional cost to the State.

Base Course, Salvaged that remains after the final surfacing has been brought to the typical section may not be placed on the inslopes unless otherwise approved by the Engineer, and shall be disposed of by the Contractor at a site approved by the Engineer. The outside shoulder inslope shall be at a 4:1 or flatter and the median shoulder inslope shall be at a 5:1 or flatter. Care shall be taken so that a minimum 4" depth of topsoil shall be placed over the entire disturbed area while proper drainage is maintained. See Section D for placement of topsoil. Final acceptance of the inslopes will be at the discretion of the Engineer. If proper drainage can not be obtained or the inslopes can not be finished to the satisfaction of the Engineer, the Contractor will be required to remove the excess material to the satisfaction of the Engineer at no additional cost to the State.

The salvaged material shall be reused on this project as per the note for Base Course, Salvaged.

### **CULVERTS**

All pipe entrances will be cleared of dirt and debris prior to replacing pipe end sections.

All costs of removing damaged portions of culverts shall be included in the price bid for culverts and ends.

The Contractor shall verify the pipe sizes prior to ordering material.

### **CULVERT CLEANOUT**

Material in all existing culverts shall be cleaned out by water flushing or other approved methods.

It is the responsibility of the Contractor to visit the sites to determine the extent of culvert cleaning work required. The Engineer will have final determination as to which pipes will be cleaned out during construction.

Cost for this work shall be incidental to the contract unit price per each for CLEANOUT PIPE CULVERTS.

The Contractor shall implement appropriate sediment control measures prior to water flushing in order to prevent discharges from project boundaries to comply with the Storm Water Permit.

### TIE BOLTS FOR RCP CULVERTS

Tie bolts shall be installed on all reset and newly installed RCP Flared Ends that are connected to both existing and newly installed RCP.

### **NOTICE – GALVANIZED COATINGS**

Be advised that the galvanized coatings on pipe culverts contain lead. The Contractor should plan his/her operations accordingly, and inform his/her employees of the hazards of lead exposure when a torch is used for cutting pipes.

### REPROFILING DITCH

Reshaping and clearing is needed in the existing median ditch and north ditch to accommodate appropriate drainage. Longitudinal slopes must be 10:1 or flatter adjacent to reprofiling locations. This work shall be done to the satisfaction of the Engineer. All costs associated with clearing and reshaping of the existing median ditch and north ditch, including labor, excavation, equipment, and incidentals shall be paid for by the station at the contract unit price for Reprofiling Ditch. All work will be within the state's ROW.

### **INCIDENTAL WORK**

The Contractor will verify all maintenance crossovers and ditch blocks have the correct inslopes, 10:1 with no culvert and 6:1 with longitudinal culvert. The Contractor shall reshape all maintenance crossovers and ditch blocks not in compliance with South Dakota Standard Specifications. See standard plates. The Contractor will ensure proper drainage to all transverse culverts. The inslope for maintenance crossovers and ditch blocks with transverse culverts located adjacent to them will be 10:1.

Cost for this work shall be incidental to the contract lump sum price for INCIDENTAL WORK.

### REMOVE POLYMER MODIFIED ASPHALT GROWTH JOINT

All costs to remove the polymer modified asphalt growth joints shall be incidental to the contract unit price per foot for MEMBRANE SEALANT EXPANSION JOINT.

### **CONTRACTOR FURNISHED BORROW**

The Contractor shall provide a suitable site for Contractor Furnished Borrow material for use in pipe end repair and inslope flattening. The Contractor is responsible for obtaining all required permits and clearances for the borrow site. The borrow material shall be approved by the Engineer.

Payment is based on plans quantity for "Contractor Furnished Borrow" in the "TABLE OF PIPE AND RELATED ITEMS", and the following table.

Restoration of the Contractor Furnished Borrow site shall be the responsibility of the Contractor.

Contractor Furnished Borrow	Water for Embankment (Mgal)	Volume (CuYd)
Sta. 380+72 to 403+68.31	4.8	375
Sta. a 0+00.00 to a 141+06.76	51.2	3,969
Sta. a 143+88.55 to a 373+48.46	79.2	6,142
Sta. a 382+21.83 to a 429+94	16.8	1,304
Totals:	152.1	11,791

### **GRAVEL CUSHION, MODIFIED GRADATION**

Gravel Cushion, Modified shall conform to the following gradation:

Pas Pas Pas Pas Pas Pas

All other requirements for Gravel Cushion shall apply.

# **GRAVEL CUSHION, MODIFIED AND BASE COURSE, SALVAGED**

The Base Course, Salvaged shall be obtained from the stockpile site(s) provided by the Contractor from the material salvaged on this project and may be used without further quality and gradation testing. The Gravel Cushion, Modified material shall be combined with the salvaged Lime Treated Base for the tie ins to structures within the project limits and at the beginning and the end of the project. Blending of the material on the roadway will be allowed. Plans quantity will be the basis of measurement and payment for Base Course, Salvaged.

Base Course, Salvaged taken from stockpile sites other than from the shoulder and inslope sites, shall be run over a 1 1/2 inch screen prior to placement.

ssing No. 4 sieve	46-70%
ssing No. 8 sieve	34-58%
issing No. 40 sieve	13-35%
issing No. 200 sieve	3.0-12.0%

### GRAVEL CUSHION, MODIFIED AND BASE COURSE, SALVAGED -CONTINUED

Included in the Estimate of Quantities are 50 tons of Gravel Cushion, Modified or Base Course, Salvaged per mile and 0.6 Mgal of Water for Granular Material per mile for backfilling of digouts of the existing surface at locations to be designated by the Engineer. Compaction of the Gravel Cushion, Modified or Base Course, Salvaged for the digouts shall be to the satisfaction of the Engineer. There is an estimated 8.4 miles required for the project.

### PIT RUN MATERIAL

Pit Run material shall be obtained from a granular source and shall conform to the following gradation:

Passing	6 inch sieve	100%
Passing	No. 4 sieve	0-60%
Passing	No. 200 sieve	0-20%

Pit Run material shall be compacted to 95% or greater of Maximum Dry Density as determined by the Specified Density Method in layers not exceeding 8 inches loose depth. If the material does not contain enough fines to allow for conventional density testing (SD 105 or SD 106), the material shall be compacted as specified for A-2-4(0) and A-3 soils. Minimum compaction testing requirements will be one test per crossover location.

Pit run will be paid for at the contract unit price per ton. Payment will be full compensation for furnishing and placing materials, labor, equipment, test strips (if required), and all incidentals required.

Nonwoven Geotextile Separator Fabric has been included in the bid items. This fabric is to be used as a separator between the Pit Run and the Gravel Cushion, Modified to prevent migration of fines from the Gravel Cushion, Modified into the Pit Run. If the Pit Run Material contains enough fines as placed to prevent the loss of material from the Gravel Cushion, Modified, the separator fabric may be eliminated by CCO. Nonwoven Geotextile Separator Fabric will conform to Section 831, Standard Specifications.

### **ALKALI SILICA REACTIVITY**

Fine aggregate shall conform to Section 800.2.D Alkali Silica Reactivity (ASR) Requirements of the Standard Specifications.

The Department will use the running average of the last three known expansion test results or less for determining acceptability of source and the required Type of cement. These expansion results are reported in the following table. Additional testing, when requested by the Contractor, will be performed by the Department at the Contractor's expense.

The values listed in the table are intended for use in bidding. If a previously tested pit by SDDOT with acceptable test values (less than 0.250) is discovered after letting to require Type V cement (greater than 0.250) the Department will accept financial responsibility for the change from Type II to Type V cement.

Type II or Type V cement will not change the requirement for the fly ash. The cost for either type of cement shall be subsidiary to the contract item.

Below is a list of known fine aggregate sources and the average corresponding 14 day expansion values:

 These sources will require Type V cement in the concrete mix design and Class F (Modified) fly ash as specified.

### ASPHALT CONCRETE COMPOSITE

Mineral aggregate for the Asphalt Concrete Composite shall conform to the requirements for Class E, Type 1 or Type 2.

Included in the Estimate of Surfacing Quantities is 10 tons of Asphalt Concrete Composite for repair of spalls in the existing surface to fill and level joints, cracks and other surface irregularities designated by the Engineer. This material shall be placed and compacted by methods and to a density satisfactory to the Engineer.

Included in the Estimate of Surfacing Quantities is 150 tons of Asphalt Concrete Composite per mile to repair the median and outside shoulders prior to placing the fabric.

All other requirements in the Standard Specifications for Asphalt Concrete Composite shall apply.

The asphalt binder used in the mixture shall be PG 58-28, PG 64-22, PG 64-28 or PG 64-34 Asphalt Binder.

### **REMOVAL OF SCALE SITE**

Four Weigh in Motion Scales are located west of Groton at approximate Sta. a 426+07. The Scale Plates are bolted in place and the Scale frames to which the plates are bolted are embedded in the PCC Pavement with epoxy. The Contractor shall remove the Scale Plates and load them onto SDDOT trailers for hauling. The Contractor shall contact Ken Marks (605-773-3336) to coordinate this loading. All Scale frames shall be removed from the pavement and shall become the property of the Contractor.

All costs for the Removal of Scales and Scale frames and the Placement of 12" NONREINFORCED PCC PAVEMENT shall be incidental to the contract unit price per square yard for NONREINFORCED PCC PAVEMENT REPAIR.

STATE OF			TOTAL SHEETS
SOUTH DAKOTA	NH 0012(160)298	NO. <b>F4</b>	F79

### **CLASS E ASPHALT CONCRETE**

for Class E Asphalt Concrete shall conform to the ass E Type 1.

nts for Class E shall apply.

### VEMENT

inted P.C.C. Pavement is nonreinforced. The existing contraction joints are constructed on a repetitive

ed PCC Pavement removed from this project may be as Gravel Cushion, Modified provided the material Specifications for Gravel Cushion, Modified. If the as Gravel Cushion, Modified, payment for the material act unit price per ton for Gravel Cushion, Modified. There 4.1 tons of PCC Pavement on this project that could be sed.

### **NONREINFORCED PCC PAVEMENT REPAIR – GENERAL**

PCC Pavement Repair shall be done prior to placing the Geotextile Bond Breaker Fabric and PCC Overlay.

Locations and size (length or width) of concrete repair areas are subject to change in the field, at the discretion of the Engineer. Payment will be based on actual area replaced.

Existing concrete pavement shall be sawed full depth at the beginning and end of the PCCP repair areas. When either the beginning or end of a PCCP repair area falls close to an existing joint or crack, the PCCP repair area shall be extended to eliminate the existing joint or crack. Where possible, new working joints shall be adjacent to existing working joints.

Saw cuts that extend beyond the repair area shall be minimized and filled with a non-shrinkage mortar mix at the Contractor's expense.

Existing concrete pavement in the replacement areas shall be removed by the lift out method or by means that minimize damage to the base and sides of remaining in place concrete. All removed material shall be removed from within the right-of-way by the end of the workday. Damage to adjacent concrete caused by the Contractor's operations shall be removed and replaced at the Contractor's expense.

If the pavement replacement area is entirely on either side of the existing contraction joint, the location of one of the working joints will be at the original location. Any existing dowel bar assemblies shall be sawed off or removed.

Concrete placed adjacent to asphalt concrete shoulders shall be formed full depth to match the width of existing concrete pavement. Asphalt concrete shoulders adjacent to concrete pavement replacements shall be repaired with new asphalt concrete composite.

At repair locations where the new working joint is not opposite the existing working joint, the Contractor shall place a <sup>1</sup>/<sub>4</sub>" preformed asphalt expansion joint material along the longitudinal joint from the existing working joint to the new working joint. The expansion joint material shall meet the requirements of AASHTO M33. Cost for this material shall be incidental to the contract unit price per square yard for NONREINFORCED PCC PAVEMENT REPAIR.

# NONREINFORCED PCC PAVEMENT REPAIR

New pavement thickness shall be a minimum thickness of 12" where the existing pavement thickness is 12".

Concrete shall meet the requirements of the Standard Specifications Section 380, except as modified by the following notes:

The fine aggregate shall be screened over a one-inch square-opening screen just prior to introduction into the concrete paving mix if required by the Engineer.

The slump requirement will be limited to 3" maximum after water reducer is added and the concrete shall contain 4.5% to 7.0% entrained air. The concrete mix shall contain a minimum of 50% coarse aggregate by weight. Coarse aggregate shall be crushed ledge rock, Size #1 unless an alternative gradation is approved by the Concrete Engineer as part of the mix design submittal. The concrete mix shall contain at least 650 lbs of Type I or II cement or 600 lbs. of Type III cement per cubic yard. The minimum 28 day compressive strength shall be 4,000 psi. The Contractor is responsible for the mix design used. The Contractor shall submit a mix design and supporting documentation for approval at least 2 weeks prior to use.

Concrete shall be cured with white pigmented curing compound (AASHTO M148, Type 2) applied as soon as practical at a rate of 125 square feet per gallon. Concrete shall be cured for a minimum of 48 hours before opening to traffic. The 48 hours is based upon a concrete surface temperature of 60° F or higher throughout the cure period. If the concrete temperature falls below 60° F, the cure time shall be extended or other measures shall be taken, at no additional cost to the State. In addition to the curing requirements, a strength of 3,800 psi must be attained prior to opening to traffic.

Concrete shall be covered with suitable insulation blanket consisting of a layer of closed cell polystyrene foam protected by at least one layer of plastic. Insulation blanket shall have an R-value of at least 0.5, as rated by the manufacturer. Insulation blanket shall be left in place, except for joint sawing operations, until the 3,800 psi is attained. Insulation blanket shall be overlapped on to the existing concrete by 4'. The initial contraction joint sawing shall be performed as soon as practical after placement to avoid random cracking.

Cost for performing the aforementioned work including sawing and removing concrete, furnishing and placing concrete, sawing and sealing joints, repairing asphalt and gravel shoulders, labor, tools and equipment shall be included in the contract unit price per square yard for NONREINFORCED PCC PAVEMENT REPAIR.

### TABLE OF PCC PAVEMENT REMOVAL AND REPAIR

Location	Lane	Width	Length	Repair Area
		Feet	Feet	SqYd
Sta. a 426+07	Both	26	50	144.4
			Total	144.4

### RESTORATION OF GRANULAR MATERIAL IN PCC PAVEMENT REPAIR AREAS

An inspection of the granular material subgrade shall be made after removing concrete from each pavement replacement area. Areas of excess moisture shall be dried to the satisfaction of the Engineer. Loose material shall be removed. Each replacement area shall be leveled and compacted to the satisfaction of the Engineer.

If additional Gravel Cushion, Modified material is required, the Contractor shall furnish, place and compact Gravel Cushion, Modified to the satisfaction of the Engineer at no additional cost to the State.

Cost for this work shall be incidental to the contract unit prices per square yard for NONREINFORCED PCC PAVEMENT REPAIR.

# STEEL BAR INSERTION

Locations and quantities of concrete repair are subject to change in the field at the discretion of the Engineer. The Contractor will be responsible for ordering the actual quantity of steel bars necessary to complete the work.

The Contractor shall insert the steel bars (1  $\frac{1}{4}$ " x 18" epoxy coated plain round dowel bars and No. 8 x 18" epoxy coated deformed tie bars for transverse joints and No. 5 x 24" epoxy coated deformed tie bars for longitudinal joints) into drilled holes in the existing concrete pavement. An epoxy resin adhesive must be used to anchor the steel bar in the drilled hole.

Plain round dowel bars shall be cut to the specified length by sawing and shall be free from burring or other deformations. Shearing will not be permitted.

Epoxy resin adhesive shall be of the type intended for horizontal applications, and shall conform to the requirements of ASTM C 881, Type IV, Grade 3 (equivalent to AASHTO M235, Type IV, Grade 3).

Steel bars shall be inserted in the transverse joint on 18" centers. The first steel bar in the transverse joint shall be placed 9" from the edge of the slab closest to centerline. Steel bars shall be inserted in the longitudinal joint on 30" centers and shall be a minimum of 15" from either transverse joint. A typical one-lane patch 12' wide and 6' long will require 18 steel bars (8 in each transverse joint and 2 in the longitudinal joint.

The diameter of the drilled holes in the existing concrete pavement for the steel bars shall not be less than 1/8 inch nor more than 3/8 inch greater than the overall diameter of the steel bar. Holes drilled into the existing concrete pavement shall be located at mid-depth of the slab and true and normal. The drilled holes shall be blown out with compressed air using a device that will reach to the back of the hole to ensure that all debris or loose material has been removed prior to epoxy injection.

A rigid frame or mechanical device will be required to guide the drill to ensure proper horizontal and vertical alignment of the steel bars in the drilled holes.

Mix the epoxy resin as recommended by the manufacturer and apply by an injection method approved by the Engineer. If an epoxy pump is utilized, it shall be capable of metering the components at the manufacturer's designated rate and be equipped with an automatic shut-off. The pump shall shut off when any of the components are not being metered at the designated rate.

Fill the drilled holes 1/3 to 1/2 full of epoxy, or as recommended by the manufacturer, prior to insertion of the steel bar. Care shall be taken to prevent epoxy from running out of the horizontal holes prior to steel bar insertion. Rotate the steel bar during insertion to eliminate voids and ensure complete bonding of the bar. Insertion by the dipping method will not be allowed.

Cost for the epoxy resin adhesive, steel bars, drilling of holes, inserting the steel bars into the drilled holes and all other items incidental to the insertion of the steel bars shall be included in the contract unit price per each for INSERT STEEL BAR IN PCC PAVEMENT.

STATE OF	PROJECT	SHEET NO.	TOTAL SHEETS
SOUTH DAKOTA	NH 0012(160)298	F5	F79

### TABLE OF INSERT STEEL BAR INSTALLATION

Location	1 ¼" X 18" Plain Round Dowel Bars
Sta. a 426+07	48
Total	48

### TIE BARS AND LONGITUDINAL JOINTS

The use of automatic tie bar inserters will only be allowed on the vertical edge of longitudinal construction joints. The use of automatic tie bar inserters will not be allowed on sawed longitudinal joints.

Tie bars or tie bar baskets shall be held in the specified position parallel to the slab surface and perpendicular to the centerline by a supporting device. Tie bars or tie bar baskets shall be securely staked to the roadbed and shall hold the bar at the correct spacing, alignment, and elevation.

Tie bars will not require supports if inserted into the side of the pavement during slip form paving of the longitudinal construction joint operation. Failure to acquire the correct tie bar locations in the construction joint shall require the bars to be corrected and a change made to the operation which may include drilling and epoxy bars or other methods as approved by the Engineer.

The final position of each tie bar shall be within the following tolerances:

-- Vertical Placement:  $\pm T/6$  for any part of the tie bar (T = slab thickness)

-- Transverse Placement (side shift): ±3 inches when measured perpendicular to the longitudinal joint line.

If the tie bar does not meet the requirements and tolerances specified, corrective action shall be performed at the Contractor's expense to the satisfaction of the Engineer.

### 8" NONREINFORCED CONCRETE PAVEMENT AND 8" PCC OVERLAY PAVEMENT

The fine aggregate shall be screened over a 1 inch square opening screen just prior to introduction into the concrete paving mix. The Contractor will screen all of the aggregate to prevent the incorporation of foreign materials (i.e.: mud balls) into the concrete mix.

Fine aggregate shall conform to Section 800.2.D Alkali Silica Reactivity (ASR) Requirements of the Standard Specifications.

The concrete mix shall conform to the special provision for Contractor Furnished Mix Design for PCC Pavement.

There will be no direct payment for trimming of the Gravel Cushion, Modified for PCC pavement. The trimming will be considered incidental to the related items required for PCC Pavement. Trimming shall be performed as required by Section 380.3 C. of the Standard Specifications.

A minimum of <u>8</u> pavement blockouts may be required at various locations on this project to facilitate traffic during the paving activity.

Automatic dowel bar inserters will not be allowed on this project.

A construction joint will be sawed whenever new concrete pavement is placed adjacent to existing concrete pavement.

The transverse contraction joints shall be perpendicular to the centerline as detailed in the special details. In multilane areas the transverse contraction joints shall be perpendicular to the centerline and be in a straight line across the width of the pavement. In special situations the Engineer may pre-approve transverse contraction joints that do not meet these requirements. All nonconforming transverse contraction joints that are not pre-approved shall be removed at the Contractor's expense. Any method of placement that cannot produce these requirements shall not be allowed to continue.

In addition to traditional field inspection of reinforcement, a Ground Penetrating Radar (GPR) unit may be used to verify reinforcement locations in the hardened concrete. The GPR may be used any time prior to the Acceptance of Field Work being issued. All costs related to corrective measures, including but not limited to concrete removal or cutting of reinforcement, price deducts, and delays to the project schedule shall be the responsibility of the Contractor.

# **RUMBLE STRIPS**

Rumble Strips for the median shoulder shall be constructed as per Special Detail. Payment for forming rumble strips, on the median shoulder, including labor, materials and incidentals shall be at the contract unit price per mile for GRIND 12" RUMBLE STRIP OR STRIPE IN ASPHALT CONCRETE. It is estimated that 8.4 miles of asphalt concrete rumble strip will be required for the median shoulder.

Rumble Strips for the outside shoulder shall be constructed as per Standard Plate 380.15. Payment for forming rumble strips, on the outside shoulder, including labor, materials and incidentals shall be incidental to the contract unit price per square yard for 8" NONREINFORCED PCC PAVEMENT and 8" PCC OVERLAY PAVEMENT.

# LOCATION OF CONCRETE PAVEMENT JOINTS

The location of joints, as shown on the "PCC Pavement Layout" sheets, are only approximate locations to be used as a guide in the final location of joints and to afford bidders a basis for estimating the construction costs of the joints. The new joint locations will need to be adjusted +- in the field to miss the existing joint locations by at least 6". The final locations of the joints are to be designated by the Engineer during construction.

SOUTH DAKOTA	NH 0012(160)298	F6	F79

### **PAVEMENT SMOOTHNESS**

The following locations shall be tested for smoothness with a Contractor furnished and operated 25 foot California style profilograph in accordance with Section 380.3.O.2 of the Standard Specifications.

> US 12 - Sta. 380+72.00 to Sta. 403+68.31 WBL US 12 - Sta. a 0+00.00 to Sta. a 141+06.76 WBL US 12 - Sta. a 143+88.55 to Sta. a 373+48.46 WBL US 12 - Sta. a 382+21.83 to Sta. a 429+94.00 WBL

Equation Sta. 403+68.31 = Sta. a 0+00.00

### **INSLOPE TRANSITIONS**

Inslope transitions will be required at various pipe locations. Refer to Standard Plate 120.05 for details.

### **RESET 3 CABLE GUARDRAIL**

Cable guardrail shall be reset on this project as listed in the Table of Guardrail. The guardrail layout sheets show the complete installations. There are sufficient lengths of existing 3 cable guardrail on the project to accomplish the work without undue splicing of cables. Lengths and locations shall be the responsibility of the Contractor.

All 3 Cable Guardrail designated for reset shall be installed using new steel posts. All hardware used to reset the cables shall be new. All reset cables shall be in good condition. The ends of the existing cables shall be cut back to have good ends. Approximately 5 L.F. per bridge end of the existing 3 Cable Guardrail is estimated to not be reset for this purpose. The cost of the hook bolts, W beam to 3 cable transition bracket, and other miscellaneous hardware shall be incidental to the contract unit price per foot for "Reset 3 Cable Guardrail, Cable Only". All costs associated with furnishing and installing steel posts shall be incidental to the contract unit price per each for "3 Cable Guardrail Intermediate Post".

### **RESET STEEL BEAM GUARDRAIL**

Steel beam guardrail shall be reset on this project as listed in the Table of Guardrail. The guardrail layout sheets show the complete installations. There are sufficient lengths of existing steel beam guardrail on the project to accomplish the work. Lengths and locations shall be the responsibility of the Contractor.

All steel beam guardrail designated for reset shall be installed using new wood posts and blocks. All hardware used to reset the steel beam guardrail shall be new. All reset steel beam shall be in good condition. The cost of the post and splice bolts, washers, nuts and other miscellaneous hardware shall be incidental to the contract unit price per foot for "Reset Thrie Beam Rail" or "Reset W Beam Rail". All costs associated with furnishing and installing wood posts and blocks shall be incidental to the contract unit price per each for "Beam Guardrail Post and Block".

### **TEMPORARY BRIDGE END PROTECTION**

The Contractor shall place and maintain Type F movable concrete barriers. Type F movable concrete barriers shall be placed at the locations listed in the Guardrail Tables and as shown in the Guardrail Layout Sheets.

Type F movable concrete barriers placed end to end and adjacent to the bridge end shall be secured together and to the bridge to prevent separation of individual barrier sections should impact occur.

The Contractor shall pick up the concrete barriers at the South Dakota Department of Transportation Maintenance Yard located on the south side of US12, I/2 mile west of the US12/US281 Junction and install the concrete barriers as shown in the plans. At the completion of the project the Contractor shall remove and deliver all the Type F movable concrete barriers to the South Dakota Department of Transportation Maintenance Yard located on the south side of US12, I/2 mile west of the US12/US281 Junction.

The Contractor shall contact Mr. Phil Dwight (605-626-7898) at the Aberdeen Area Office to arrange for pick up and return of the barrier.

The bottoms of the connecting pins shall be secured with the retaining plate, bolt and nut as shown on shown on Plate Number 628.01 Sheet 1 of

All costs to place, maintain, remove and deliver the Type F movable concrete barrier shall be paid for per contract unit price per each for "TRAFFIC CONTROL MOVABLE CONCRETE BARRIER".

Each Type F movable concrete barrier section is to have an end to end connection and each Type F movable concrete barrier section adjacent to the bridge is to have a connection to the bridge by insertion of a pin through loops formed by rebars. The cost to anchor the Type F movable concrete barriers including wood posts and blocks shall be incidental to contract unit price per each for "TRAFFIC CONTROL MOVABLE CONCRETE BARRIER".

### TRAFFIC CONTROL CONCRETE BARRIER DELINEATORS

One 4 inch X 8 inch delineator shall be attached to the top of each of the concrete barrier sections. All costs associated with furnishing, installing, and maintaining these delineators shall be incidental to the contract unit price per each for 4" by 8" White Delineator Back to Back, Barrier Mounted.

### MOVABLE CONCRETE BARRIER END PROTECTION (CRASH ATTENUATION)

The Contractor shall furnish crash tested and approved end protection on movable concrete barrier installed on this project. End protection shall be installed parallel to the roadway and a minimum of two concrete barriers shall be installed in line with and behind the end protection. The end protection shall be attached to the concrete barrier as specified by the manufacturer.

Costs for furnishing, installing, maintaining, and removing the end protection will be paid for at the contract unit price per each for "Temporary Concrete Barrier End Protection". The concrete Barrier End Protection shall meet the requirements of NCHRP 350 TL-3.

The Contractor will be required to have immediately available replacement parts for the end protection. The Contractor will be expected to repair the end protection within 24 hours after impact or damage. Costs for replacement modules shall be paid for at the contract unit price per each for "Temporary Concrete Barrier End Module Set or Repair Kit".

# MEMBRANE SEALANT EXPANSION JOINT

1. Install all membrane sealant expansion joints at the plan shown locations in conformance to the following notes.

2. The Membrane Sealant is a foam sealant consisting of an open-cell high density polyurethane foam impregnated with either a polymer modified bitumen or a neoprene rubber suspended in chlorinated hydrocarbons. The Membrane Sealant shall be supplied by one the following companies:

Wabo HSeal Watson Bowman Acme Corp. 95 Pineview Drive, Amherst NY 14228 Phone: 716-691-7566 Fax: 716-691-9239 Web site: http://www.wbacorp.com

Sealtite 50N Schul International Company, LLC One Industrial Drive Pelham, NH 03076 Phone: 800-848-1120 Fax: 800-998-9105 Web site: http://www.sealtiteusa.com

Polytite N Sunshine Industrial 5051 Merriam Drive Merriam, KS 66203 Phone: 913-362-6300

3. The manufacturer shall supply the membrane sealant in packaging that precompresses the membrane sealant. The precompressed dimension shall be as recommended by the sealant manufacturer to provide a water tight seal throughout a joint movement range of + 25% (minimum) from the specified joint opening dimension. In no case shall the precompressed dimension exceed 75% of the joint opening width. The foam sealant shall be slowly self expanding to permit workers ample time to install the membrane sealant before the membrane sealant exceeds the joint opening width.

4. The membrane sealant shall be supplied in pieces 5 feet in length or longer. Miter the ends of each piece for ease of joining to the adjacent pieces. The membrane sealant shall have a minimum depth of 4 inches. The foam sealant shall be ultra-violet and ozone resistant.

5. The bonding adhesive used to attach the membrane sealant to the adjacent concrete shall be a waterproof epoxy adhesive that adheres to concrete surfaces and is approved by the membrane sealant supplier.

6. Adhesive used to join adjacent pieces of the membrane sealant shall be as recommended by the manufacturer.

7. The Styrofoam filler material shall be closed cell and water-tight as approved by the Engineer.

8. The minimum ambient air temperature at the time of joint installation and adhesive curing shall be 40° F.

STATE OF SOUTH DAKOTA	PROJECT	SHEET NO.	TOTAL SHEETS
	NH 0012(160)298	F7	F79

#### **MEMBRANE SEALANT EXPANSION JOINT - CONTINUED**

9. A technical representative of the membrane sealant supplier shall be present at the jobsite during installation.

10. The joint opening shall be formed during the concrete placement by Styrofoam block out material. The Styrofoam block out material shall remain in-place until the adjacent concrete has cured for a minimum of 28 days. After curing the 28 days the Styrofoam shall be removed to the plan specified depth to allow for placement of the membrane sealant material.

11. Concrete surfaces that will be in contact with the membrane sealant shall be thoroughly cleaned by abrasive blasting to remove all laitance and contaminants such as oil, curing compounds, etc. from the concrete surface. At a minimum two passes of abrasive blasting with the nozzle held at an angle to within 1 to 2 inches of the a concrete surface will be required. Cleaning of the concrete surfaces with solvents, wire brushing, or grinding shall not be permitted.

12. After abrasive blasting and immediately prior to membrane joint installation, the entire joint contact surface shall be air blasted. The air compressor used for joint cleaning shall be equipped with trap devices capable of providing moisture-free and oil-free air at a recommended pressure of 90 psi. To obtain complete bonding with the adhesive, the adjacent concrete surfaces must be dry and clean. The contact surfaces for the joint shall be visually inspected by the Engineer immediately prior to joint installation to verify the surface is dry and clean.

13. Individual spliced sections shall be installed as per the manufacturers' recommendations. The membrane joint sealant supplier shall submit a detailed installation procedure to the Engineer at least 5 days prior to joint installation for his review.

14. Traffic shall not be allowed on the joint for a minimum 3 hours unless otherwise directed by the Engineer.

15. The Membrane Sealant Expansion Joint will be measured in feet to the nearest one-tenth foot, complete in place. Measurement will be made of the overall horizontal length. The Membrane Sealant Expansion Joint will be paid for at the contract unit price per foot complete in place. Payment for this item shall be full compensation for furnishing all the required materials in place, inclusive of labor, equipment and incidentals necessary to complete the work in accordance with the plans and the foregoing specifications.

# **BALD EAGLE**

Bald eagles are known to occur in this area. If a nest is observed within one mile of the project site, notify the Environmental Project Scientist of the DOT Environmental Office at 605-773-3268.

# WHOOPING CRANE

The Whooping Crane is a spring and fall migratory bird in South Dakota that typically roosts overnight at a single location. If a Whooping Crane is sighted roosting in the vicinity of the project, borrow pit, or staging site associated with the project, notify the Environmental Project Scientist of the DOT Environmental Office at 605-773-3268 and cease construction activities in the affected area until the Whooping Crane departs.

# WATER SOURCE

The Contractor shall not withdraw water with equipment previously used outside the State of South Dakota without prior approval from the DOT Environmental Office.

The Contractor shall not withdraw water directly from streams of the James, Big Sioux, and Vermillion watersheds without prior approval from the DOT Environmental Office.

The DOT Environmental Office contact is the Environmental Project Scientist, 605-773-3268. The WATER SOURCE plan note does not relieve the Contractor of his/her responsibility to obtain the necessary permits from other agencies such as the Department of Environment and Natural Resources (DENR) and the United States Army Corps of Engineers (COE).

# WORK AFFECTING WATERWAYS

# A. WATER QUALITY

### Storm Water

The Contractor is advised this project is regulated under the Phase II Storm Water Regulations and must receive coverage under the DENR General Permit for Construction Activities. A Notice of Intent (NOI) will be submitted to DENR a minimum of 15 days prior to project start by the DOT Environmental Office. A letter must be received from DENR that acknowledges project coverage under this general permit before project start. The Contractor is advised that permit coverage may also be required by offsite activities, such as borrow and staging areas, which are the responsibility of the Contractor.

# HISTORICAL PRESERVATION OFFICE CLEARANCES

To obtain State Historical Preservation Office (SHPO) clearance, a cultural resources survey may need to be conducted by a gualified archaeologist. In lieu of a cultural resources survey, the Contractor could request a records search from Jim Donohue, State Archaeological Research Center (SARC). Provide SARC with the following: a topographical map or aerial view on which the site is clearly outlined, site dimensions, project number, and PCN. If applicable, provide evidence that the site has been previously disturbed by farming, mining, or construction activities with a landowner statement that no artifacts have been found on the site. The Contractor shall arrange and pay for the cultural resource survey and/or records search.

If any earth disturbing activities occur within the current geographical or historic boundaries of any South Dakota reservation, the Contractor shall obtain Tribal Historical Preservation Office (THPO) clearance. If no THPO exists, the required SHPO clearance shall suffice, with documentation of Tribal contact efforts provided to SHPO.

STATE OF	PROJECT	SHEET NO.	TOTAL SHEETS
SOUTH DAKOTA	NH 0012(160)298	F8	F79

A major component of the storm water construction permit is development and implementation of a storm water pollution prevention plan (SWPPP). This plan is a joint effort and responsibility of the DOT and the Contractor. The SWPPP is a dynamic document and is to be available on-site at all times. Information on storm water requirements and SWPPP are available on the following websites:

DOT: http://www.sddot.com/pe/projdev/environment stormwater.asp DENR: http://www.denr.sd.gov/des/sw/stormwater.aspx

#### **HISTORICAL PRESERVATION OFFICE CLEARANCES - CONTINUED**

To facilitate SHPO or THPO responses, the Contractor should submit a records search or cultural resources survey report to the DOT Environmental Engineer, 700 East Broadway Avenue, Pierre, SD 57501-2586 (605-773-3268). Allow 30 days from the date this information is submitted to the Environmental Engineer for SHPO/THPO approval. The Contractor is responsible for obtaining all required permits and clearances for staging areas, borrow sites, waste disposal sites, and all material processing sites. The Contractor shall provide the required permits and clearances to the Engineer at the preconstruction meeting.

#### WASTE DISPOSAL SITE

The Contractor will be required to furnish a site(s) for the disposal of construction/demolition debris generated by this project.

Construction/demolition debris may not be disposed of within the State ROW.

The waste disposal site(s) shall be managed and reclaimed in accordance with the following from the General Permit for Highway, Road, and Railway Construction/Demolition Debris Disposal Under the South Dakota Waste Management Program issued by the Department of Environment and Natural Resources.

The waste disposal site(s) shall not be located in a wetland, within 200 feet of surface water, or in an area that adversely affects wildlife, recreation, aesthetic value of an area, or any threatened or endangered species, as approved by the Engineer.

If the waste disposal site(s) is located such that it is within view of any ROW, the following additional requirements shall apply:

- 1. Construction/demolition debris consisting of concrete, asphalt concrete, or other similar materials shall be buried in a trench completely separate from wood debris. The final cover over the construction/demolition debris shall consist of a minimum of 1 foot of soil capable of supporting vegetation. Waste disposal sites provided outside of the State ROW shall be seeded in accordance with Natural Resources Conservation Service recommendations. The seeding recommendations may be obtained through the appropriate County NRCS Office. The Contractor shall control the access to waste disposal sites not within the State ROW through the use of fences, gates, and placement of a sign or signs at the entrance to the site stating "No Dumping Allowed".
- 2. Concrete and asphalt concrete debris may be stockpiled within view of the ROW for a period of time not to exceed the duration of the project. Prior to project completion, the waste shall be removed from view of the ROW or buried and the waste disposal site reclaimed as noted above.

The above requirements will not apply to waste disposal sites that are covered by an individual solid waste permit as specified in SDCL 34A-6-58, SDCL 34A-6-1.13, and ARSD 74:27:10:06.

Failure to comply with the requirements stated above may result in civil penalties in accordance with South Dakota Solid Waste Law, SDCL 34A-6-1.31.

All costs associated with furnishing waste disposal site(s), disposing of waste, maintaining control of access (fence, gates, and signs), and reclamation of the waste disposal site(s) shall be incidental to the various contract items.

#### TRAFFIC CONTROL CROSSOVERS

Traffic Control Crossovers shall be constructed per layouts provided in these plans at the following locations:

Sta. 366+00 WBL Sta. a 439+00 WBL

The maximum horizontal degree of curve shall be 6°45' and the vertical alignment shall be constructed to provide adequate stopping sight distance. Any existing drainage impacted by the Traffic Control Crossovers shall be addressed. All costs associated with the temporary modification of an existing drainage shall be incidental to the various contract items needed to construct the Traffic Control Crossovers. The Engineer shall have final approval of the horizontal and vertical alignment of the Traffic Control Crossovers.

Any pipe necessary to drain water under the Traffic Control Crossovers are considered incidental to the Traffic Control Crossovers and shall be incidental to the various contract items for the Traffic Control Crossovers. The Contractor is responsible for sizing the pipe and providing appropriate end sections as directed by the Engineer.

See Section D, Erosion and Sediment Control Plans, for removing and replacing topsoil.

#### REMOVE TRAFFIC CONTROL CROSSOVERS

Upon completion of the project the Traffic Control Crossovers shall be removed. The asphalt concrete, granular material and pit run material shall be disposed of by the Contractor as approved by the Engineer. All culverts, pipe end sections and interim crossover closure materials shall become the property of the Contractor.

Cost for removing the asphalt concrete and granular material and removal of culverts and pipe end sections shall be incidental to the contract lump sum price for REMOVE TRAFFIC DIVERSION(S).

#### **CONTROL OF ACCESS**

If a Contractor's operations would require access to the ROW in any locations not currently designated as public access, prior approval must be obtained from the Department. All requests will be reviewed on the basis of safety and construction sequencing. A Contractor shall not assume that all requests will be granted.

The Contractor shall be responsible for all safety control and signing measures.

The request for access shall be provided in writing to the Project Engineer two weeks in advance of any proposed break in control of access.

#### **TYPE II FIELD LABORATORY**

Substitution of a cellular telephone for the hard-wired touch-tone telephone is not allowed, as state personnel need the ability to download information over direct phone lines. The phone is intended for state personnel usage only. Contractor personnel are prohibited from using this phone unless pre-approved by the Project Engineer.

The lab shall be equipped with an internet connection such as DSL, cable modem, or other approved service. The internet connection shall be provided with a multi-port wireless router. The internet connection shall be a minimum speed of 512 Kb unless limited by job location and approved by the DOT. Prior to installing the wireless router the Contractor shall submit the wireless router's technical data to the Area Office to check for compatibility with the state's computer equipment. The internet connection is intended for state personnel usage only. The Contractor's personnel are prohibited from using the internet connection unless pre-approved by the Project Engineer.

The Contractor shall submit a copy of each monthly bill for calls charged to this phone at the end of each month. The Project Engineer will then audit the bills to ensure all calls are legitimate and then initiate a Construction Change Order (CCO) to reimburse the Contractor for the actual phone calls made, including local and long distance calls. Reimbursement will not be made for fees associated with the purchase, installation, disconnection, monthly line charges, and incidentals involved in the installation, maintenance, and disconnection of the phone (including attachments). These items shall be incidental to the contract unit price per each for "Type II Field Laboratory".

The Contractor will provide an extra oven and a 6'x4' 4" thick concrete level pad placed outside of the lab to the satisfaction of the Engineer.

# PCC OVERLAY CENTERLINE PROFILE

The PCC Overlay centerline profile shown in these plans was used to calculate the cubic yards for the PCC Overlay furnished. The PCC Overlay centerline profile was designed so that there will be a minimum of 8 inches of PCC at all locations of the typical sections. The PCC Overlay centerline profile sheets are included in the plans for information only. The Contractor shall create a new PCC Overlay centerline profile in accordance with the Special Provision for Contractor Staking.

# **SPECIAL DETAILS**

# PCC PAVEMENT LONGITUDINAL JOINTS WITH TIE BARS

└─No.5 Epoxy Coated Deformed Tie Bar

The epoxy coated deformed tie bars shall be spaced according to the following table.

Tie Bar Spac	ng 30"
Joint Spacing	# of Bars
5' to 7'	2
7.5' to 9.5'	3
10' to 12'	4
12.5 to 14.5	5
15' to 17'	6
17.5' to 19.5'	7
20' to 22'	8
22.5' to 24.5'	9

Tie Bar Spa	cing 48"
Joint Spacing	# of Bars
6.5' to 10'	2
10.5' to 14'	3
4.5' to  8'	4
18.5' to 22'	5

### GENERAL NOTES FOR SHEET I:

The tie bars shall be placed a minimum of 15 inches from any transverse contraction joints.

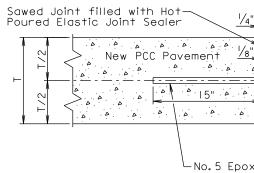

The keyway is optional and is not required. When concrete pavement is formed and a keyway is provided, a metal recess strip shall be used. When concrete pavement is slip formed, a metal recess strip is not required.

The required number of No.5 epoxy coated deformed tie bars shall be uniformly spaced within each panel. The tie bars shall be evenly spaced a maximum of 48" center to center for a female keyway or a maximum of 30" center to center for a vertical face and male keyway. The keyway shown is a female keyway. The maximum spacing shall apply to tie bars within each panel.

## PCC PAVEMENT JOINTS WITH

ENERAL NOTES:				
The detailed drawings are		illustrative purpose and depicts		
	con	er.lf new movable concrete barr structed according to the F shap ite 628.10.		
ach movable concrete bar	rier	section weighs 5030 <u>+</u> pounds.		
Each movable concrete bar connection by insertion of		section is detailed to provide er in through steel loops.	nd "A" to end	d "B"
	prc	on of the F shape traffic contro ject,however,only the same type •		
		ons shall be placed to provide un ce as approved by the Engineer.	niform beari	ng of the
Novable concrete barrier s	secti	ons shall never be moved or lifte	ed using the	e end loops.
sections are considered do	amage	ions that have been damaged shal ed if the loops are end welded of there is exposed rebar from frac	nto existing	g damaged
site, installing, and returnir	ng th	parriers from the specified locat ne barriers to the specified loca r each for "Traffic Control Movab	tion shall be	incidental

SOUTH DAKOTA	NH 0012(160)298	F79	F79

## **SECTION M - ESTIMATE OF QUANTITIES**

Bid Item Number	Item	Quantity	Unit	
633E1300	Pavement Marking Paint, White	321.0	Gal	
633E1305	Pavement Marking Paint, Yellow	12.0	Gal	
633E3000	Durable Pavement Marking, 4" White	111,574	Ft	
633E3005	Durable Pavement Marking, 4" Yellow	89,259	Ft	
633E5100	Grooving for Durable Pavement Marking, 4"	196,906	Ft	

## **PAVEMENT MARKINGS FOR 2 WAY HEAD TO HEAD TRAFFIC**

Included in the Estimate of Quantities are 305 gallons of white paint to complete the painting of the Eastbound Lanes 4" edgelines prior to opening to two-way head to head traffic. Existing yellow edgeline in the Eastbound lanes shall be painted white.

## **DURABLE PAVEMENT MARKING**

The Contractor shall mark the center skip lines and edgelines in both the WBL and EBL with a durable pavement marking, 4". Durable pavement markings shall be installed as per the special provision included in the plans.

Durable pavement marking application in the EBL shall be limited to that portion of the EBL that have a PCCP surface Sta. 403+00 to a425+40 (thru equation) and on the asphalt surface from Sta. a425+40 to a439+00. Waterborne pavement markings shall be installed in the EBL from Sta. 366+00 to 403+00.

## TABLE OF DURABLE PAVEMENT MARKINGS

						Markings,
Sta	to	Sta	Length	4" W Wide Shoulder Edgeline	CL Skips	4" Yellow Narrow Shoulder Edgeline
			(Ft)	(Ft)	(Ft)	(Ft)
Westbour	nd La	ines:				
380+72.00		a429+94 (Thru Equation)	45290.3	45290.3	11322.6	45290.3
Eastboun	d Laı	nes:				
403+00		a425+40 (Thru Equation)	42608.3	42608.3	10652.1	42608.3
a425+40		a439+00	1360.0	1360.0	340.0	1360.0
Т	otal		87898.6	89258.6	22314.8	89258.6

The Engineer may eliminate the 1360' of White edgeline and 340' of White CL Skips from Sta. 425+40 to 439+00 if the condition of the in place durable epoxy pavement does not warrant replacement.

Both bridges in the east bound lane and both bridges in the west bound lane shall not be grooved because the bridge deck contain a bridge deck epoxy chip seal. The combined length of the 2 east bound bridge deck is 674' and the combined length of the 2 west bound lane bridges is 1,071'.

Prior to application of the durable pavement markings on both bridge decks in the east bound lane and both bridge decks in the west bound lane, the area to receive the durable markings shall be sand blasted to remove the in place pavement markings and delirious material. The cost of sand blasting shall be incidental to the contract unit price per foot for durable pavement markings.

## **COMPLETION OF PERMANENT PAVEMENT MARKINGS**

Pavement markings must be installed on the new Westbound Lanes prior to restoring traffic to the reconstructed Westbound Lanes.

The Contractor shall begin installation of the waterborne or durable pavement markings on the Eastbound Lanes within the project limits following the removal of the channelizing devices separating the two-way traffic. The Contractor shall complete the pavement markings on the edgeline adjacent to the narrow shoulder first.

The Contractor will have 7 working days following the opening of the WBL to complete the installation of durable pavement marking paint on the edgeline adjacent to the narrow shoulder on the Eastbound Lanes.

The Contractor will have 14 working days following the opening of the WBL to complete the installation of the centerline skip and wide shoulder edgeline on the Eastbound Lanes

For each working day after the plans specified working days the application of permanent pavement marking remains uncompleted, the Contractor will be assessed \$1000.00 per day liquidated damages.

This provision applies up to the Contract Completion Date, as extended. After the completion date, liquidated damages will be assessed in accordance with Section 8.7, until the permanent pavement marking is completed, even though the project may be open to traffic.

## WATERBORNE PAINT FORMULATED WITH "XSR" BINDER RESIN

Waterborne paint applied after October 15 shall be formulated with "Fastrack XSR" binder resin manufactured by Dow, and shall be applied in accordance with manufacturer's recommendations, including minimum temperature requirements.

Waterborne paint formulated with "Fastrack XSR" binder resin shall conform to section 980 of the Standard Specifications except for the following:

980.1.1 Quantitative Requirements:

61.5.

The Pigment, Percent By Weight when tested in accordance with ASTM D3723 for white: 60.0-63.0 and for yellow: 56.1-59.2.

The Non-volatile Vehicle, percent by weight; min. white: 41.5 and yellow: 41.5 when tested in accordance with FTMS 141c (method 4051.1)

## **GLASS BEADS**

Glass bead application rate when applied with waterborne paint shall be at a rate of 8 Lbs. glass beads per gallon of paint applied.

STATE OF	PROJECT	SHEET NO.	TOTAL SHEETS
SOUTH DAKOTA	NH 0012(160)298	M2	M3
Rev. 2	-21-12 SLS		

980.1 A - Resin Binder shall be Fastrack XSR

The Pigment, Percent By Weight for white : 60.0 – 63.0, and for yellow: 58.5-

## FURNISHING AND APPLYING PAVEMENT MARKINGS

## DIVIDED ROADWAY (ONE DIRECTION SHOWN)

30' 10' **OUTSIDE SHOULDER MEDIAN SHOULDER** 4" WHITE - 2" from CL 4" YELLOW WHITE 4 11'-2" 11'-8" 12' 12'

Approximate waterborne paint application rates shall be as follows:

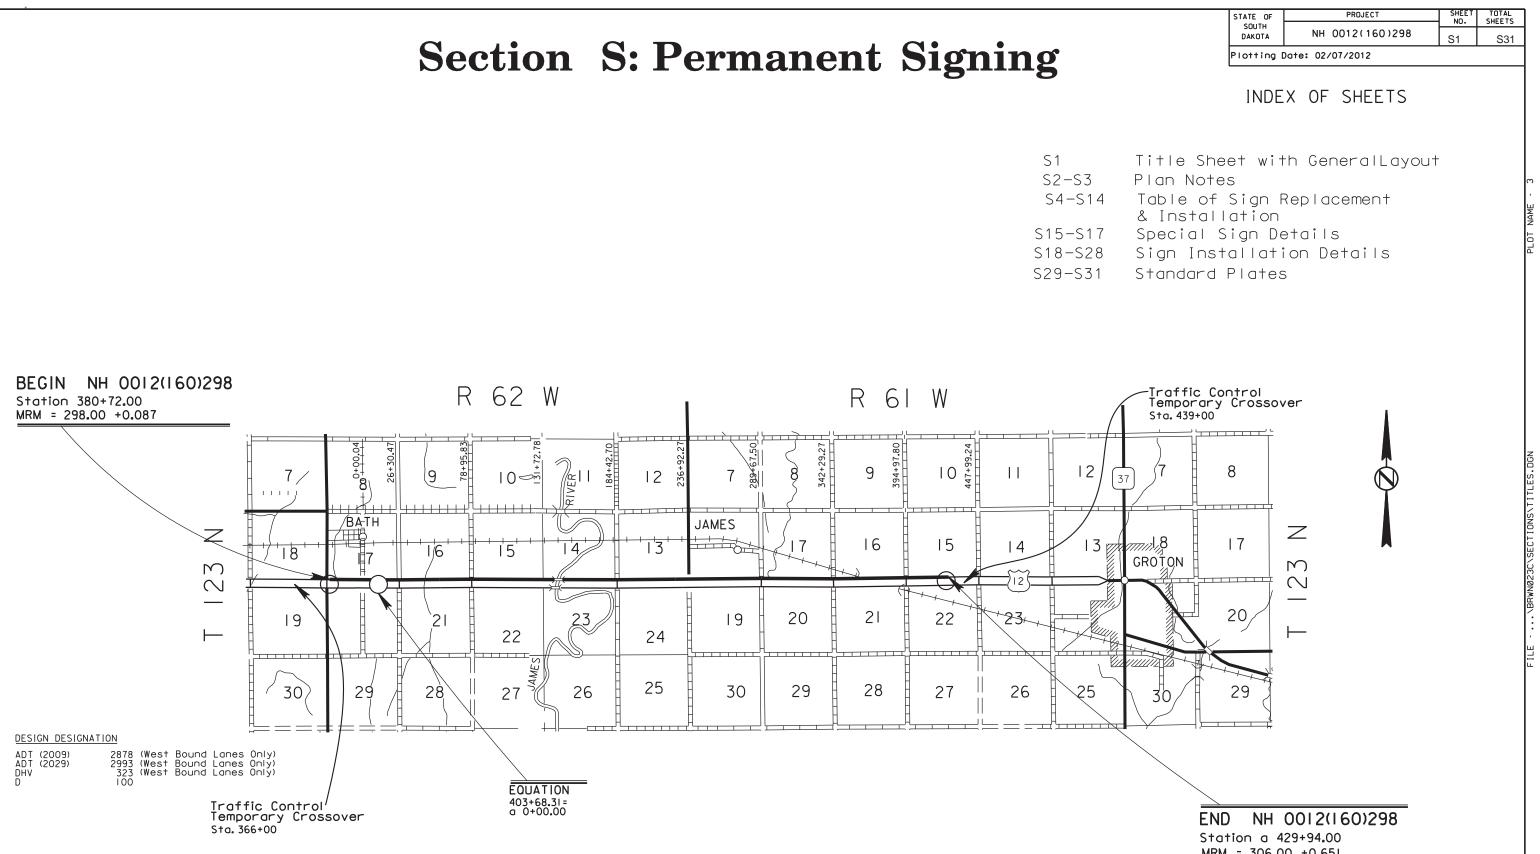

DIVIDED ROADWAY	
(Rates for one line)	
Solid Yellow Edgeline	
Rate = 16.9 Gals./Pass-Mile	
Dashed White Centerline	
Rate = 4.6 Gals./Pass-Mile	
Solid White Edgeline	
Rate = 16.9 Gals./Pass-Mile	
Glass Beads = 8 Lbs./Gal.	

Typical pavement marking as shown on this sheet shall be applied throughout the entire length of divided roadway.

Traffic Control shall be incidental to the cost of application. The striper and advance or trailing warning vehicle shall be equipped with flashing amber lights or advance warning arrow panel.

**NOTE:** All pavement marking dimensions are based on 12' driving lanes.

MRM = 306.00 +0.651

## **ESTIMATE OF QUANTITIES**

Bid Item Number	Item	Quantity	Unit
110E0130	Remove Traffic Sign	68	Each
632E1320	2.0"x2.0" Perforated Tube Post	1,171.0	Ft
632E1330	2.25"x2.25" Perforated Tube Post	445.5	Ft
632E2020	4"x4" White Delineator with 1.12 Lb/Ft Post	85	Each
632E2220	Guardrail Delineator	35	Each
632E2510	Type 2 Object Marker Back to Back	36	Each
632E2520	Type 2 Object Marker	35	Each
632E3203	Flat Aluminum Sign, Nonremovable Copy High Intensity	774.8	SqFt
632E3205	Flat Aluminum Sign, Nonremovable Copy Super/Very High Intensity	618.8	SqFt

## GENERAL PERMANENT SIGNING NOTES

Permanent sign locations shall be staked in the field by the Engineer. The Contractor shall give the Engineer a minimum of two weeks advance notice to allow for staking prior to sign/post installation. The Contractor shall be responsible for staking the location of Delineators.

The Contractor shall be responsible for contacting South Dakota One Call to locate the utilities at the staked sign installation locations.

Prior to ordering sign posts, the Contractor shall verify post lengths.

## **REMOVE EXISTING SIGNS**

Existing signs within the project limits are summarized in the Table of Sign Replacement and Installation. This table provides the approximate MRM location for each sign. Existing signs in the table shall be removed and not reused.

All existing signs, and hardware removed shall become the property of the Contractor.

Holes remaining from the removal of 4"x6" sign posts shall be backfilled and compacted with material placed in layers not to exceed 6 inches in depth.

All costs associated with the removal of existing signs, posts, and hardware shall be incidental to the contract unit price per each for "Remove Traffic Sign"

## **NEW PERMANENT SIGNING**

New signs for installation are summarized in the Table of Sign Replacement and Installation.

Special design signs are illustrated on the Specail Sign Design layout sheets.

## Sign Design

Signs shall be constructed as required per the Manual on Uniform Traffic Control Devices (MUTCD), the latest edition of "Standard Highway Signs", and as specified on the Permanent Sign Design Layouts sheet shown in the plans.

All sign material shall comply with Section 982 of the Standard Specifications.

All upper/lower case letters and numerals shall be as required per the MUTCD, the latest edition of "Standard Highway Signs", and as illustrated on the Permanent Sign Design Layouts sheet.

The Contractor shall furnish the Aberdeen Region Traffic Engineer (Alan Petrich; P.O. Box 1767; Aberdeen, SD 57402) with a detailed sign layout sheet for each sign shown. These detailed sign layout shall be approved by the Region Traffic Engineer prior to ordering the signs.

## Sign Sheeting

Signs shall be constructed using High Intensity (ASTM D4956 Type III or IV) or Super/Very High Intensity (ASTM D4956 Type XI) reflective sheeting as summarized in the Install New Signs table.

All signs shall be manufactured in accordance with the sheeting manufacturer's recommendations utilizing a matched component system, including inks, electronic cuttable films, and protective overlay films. Digitally printed signs will not be accepted.

All black legend and borders shall be nonreflectorized (unless otherwise specified in these plans).

## SQUARE TUBE POST SLEEVE

rivets.

stiffener details. The Contractor shall use 3/8 inch diameter rust proof machine sign bolts, flat metal washers, neoprene washers (against the sign sheeting), lock washers, and nuts to fasten the sign to the channel aluminum and posts. A minimum of two bolts shall extend through each post.

All costs associated with furnishing and installing the new permanent signs, furnishing and installing stiffeners and hardware shall be incidental to the contract unit price per square foot for "Flat Aluminum Sign, Nonremovable Copy High Intensity" or "Flat Aluminum Sign, Nonremovable Copy Super/Very High Intensity".

## SQUARE TUBE ANCHOR SLEEVE

The Contractor shall furnish and install new square tube anchor sleeve as follows:

2.5" x 18", 12 Gauge square tube anchor sleeve, (or equivalent components as approved by the Engineer).

The square tube anchor sleeve may be obtained from 3-D Specialties, Inc.; 1110 25<sup>th</sup> Ave. N.; P.O. Box 1615; Fargo, ND 58107.

STATE OF	PROJECT	160)298 S2	TOTAL SHEETS
SOUTH DAKOTA	NH 0012(160)298	S2	S31
Plotting	Date: 01/10/2012		

## Sign Installation Hardware

Aluminum U-Channel stiffeners shall be used on all standard highway signs greater than 36 inches in width and shall conform to Allov 6063-T6 or 6061-T6. The U-Channel shall be 2 inches in width and free of holes. The U-Channel stiffeners shall also be used to connect various signs together so that an entire sign assembly can be erected on a single installation.

Stiffeners may be fastened to signs by use of 1/4 inch diameter drive

Refer to the Breakaway Sign Supports diagram for typical sign and

A 2.25" x 2.25" x 4' perforated tube post (12 Gauge) shall be used as the anchor post for installation with the square tube anchor sleeve.

All 2.5"x2.5" perforated tube post (10 Gauge) shall be sleeved with a 2 3/16"x2 3/16"x4' perforated tube post (10 Gauge).

## WINGED SLIP BASE ANCHOR

The Contractor shall furnish and install new winged anchor as required per the plans.

Winged anchor shall be installed using direct drive method.

Winged Anchor shall consist of, a slip base (upper), 48 inch long winged anchor (lower), and hardware kit.

The slip base, 48 inch long winged anchor, and hardware kit components (or equal as approved by Engineer) may be obtained from 3-D Specialties, Inc.; 1110 25<sup>th</sup> Ave. N.; P.O. Box 1615; Fargo, ND 58107.

## **TYPE 2 OBJECT MARKERS**

Type 2 object markers that are attached to other sign posts as indicated in the Table of Sign Installation will be paid for at the contract unit price per square foot for "Flat Aluminum Sign, Nonremovable Copy Super/Very High Intensity".

Type 2 object markers that are not attached to another sign post shall be paid for at the contract unit price per each for "Type 2 Object Marker Back to Back". These markers shall be installed at locations indicated in the Table of Sign Installation.

Type 2 object marker shall be installed at 200 Ft. spacing from MRM 301.307 to MRM 302.465 on the North Side of the West bound lanes regular delineation shall not be installed at this location. Payment for these object markers shall be at the contract unit price for "Type 2 Object Marker". 30 Type 2 Object Markers have been added to the Estimate of Quantities for this purpose.

## **MILEAGE REFERNCE MARKERS**

MRMs (Mileage Reference Markers) are not to be disturbed unless noted in the Table of Sign Installation. MRMs that are attached to other posts as noted in the Table of Sign Installation shall be paid for at the contract unit price for "Flat Aluminum Sign, Nonremovable Copy High Intensity".

## DELINEATION

Delineators South of the East bound lane are not to be disturbed. Delineators North of the West bound lane are to be removed before shoulder operations begin. Delineators designated for removal shall become property of the Contractor. New delineators shall be installed at 528ft intervals. Payment for removal of the and installation of delineators shall be paid for at the contract unit price per each for "4"X4" White Delineator with 1.12 LB/FT Post."

# **INSTALLATION DETAILS FOR MULTIPLE** SIGN ASSEMBLIES

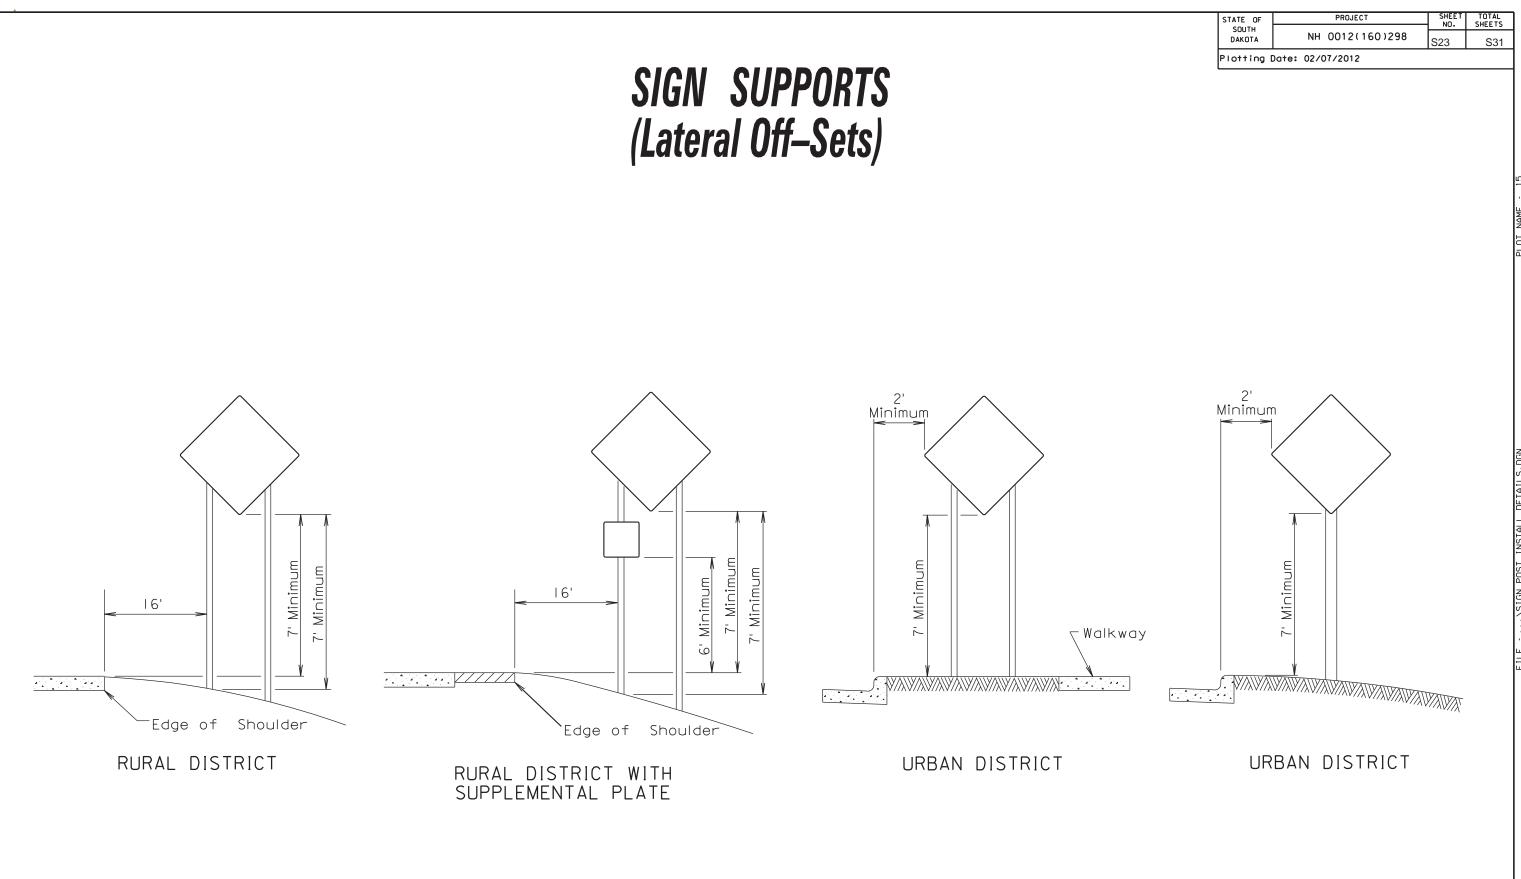

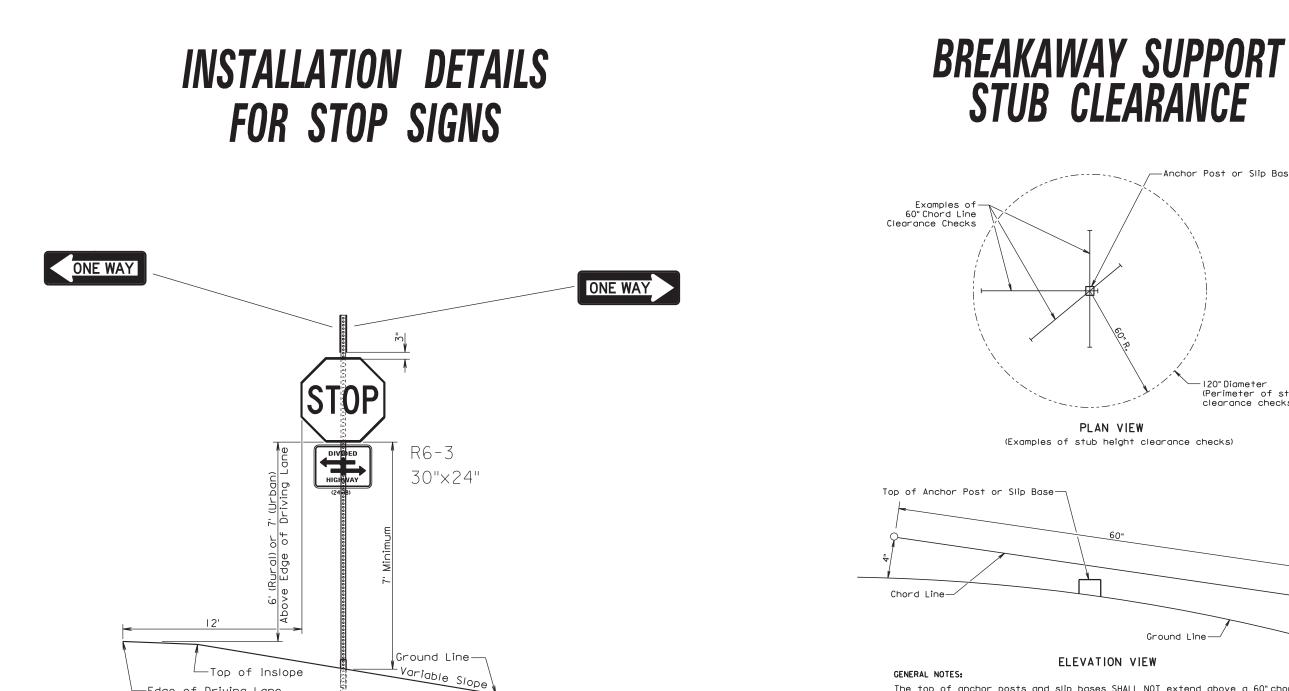

## GENERAL NOTES:

The sign posts and bases shown are for illustrative purpose. The post type required shall be the type specified in the plans.

All breakaway sign supports shall comply with NCHRP 350 or MASH crash testing requirements and FHWA requirements. The Contractor shall provide post installation details at the preconstruction meeting for all breakaway sign support assemblies.

STATE OF SOUTH DAKOTA	PROJECT	SHEET NO.	TOTAL SHEETS
	NH 0012(160)298	S22	S31
Plotting [	)ate: 02/07/2012		

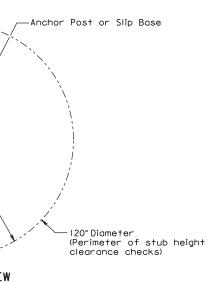

The top of anchor posts and slip bases SHALL NOT extend above a 60" chord line within a 120" diameter circle around the post with ends 4" above the ground.

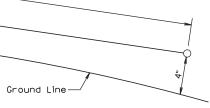

At locations where there is curb and gutter adjacent to the breakaway sign support, the stub height shall be a maximum of 4" above the ground line at the localized area adjacent to the breakaway support stub.
